[1852?]

Dear Sir

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

L. Parry, who has already
instructed You about two bundles
dried plants, collected by him
and myself, was so kind to
offer me also a little room
in that box, which is proposed
to be sent to You. Besides
some few specimens, we gathered
nearly one and the same collect-
ion. You will permit me to
make here some remarks about
those, which I have enclosed.
The whole Texan Flora is

C

more or less new and strange to
me, therefore I was less scrupulous
in taking for my purposes.
Some glances of your well exer-
cised experienced eyes are, I am
sure, sufficient to separate the
worthy from the unworthy.
My interests to gather plants
are only of a private nature
to augment my herbary and if
I should be enabled to serve one
or the other of my botanical
friends. Nevertheless would I
feel very happy, if You find
something among my plants
which were of any interest for
the purposes of the party, of
which I am also a member,
I kept for myself of the most
part of these plants duplicates

therefore you freely can use them as worthing _ Specimens.
With Dr Parry, whom I very much regard, has established I a kind of a silent scientific exchange and therefore I shall get by him again what perhaps by your studies should be spoiled for a herbary.
About my situation at this party I can not tell much. The whole conditions of the comission in regard of the approbration, the money, this „nervus rerum" and about the deliverance in our Majors hands are not yet settled. Until now were topographic, natural history and sketching assigned to me and I hope, that my chef is satisfied with my work. What now farther is to be done and in what employment I shall enter is dark before my eyes and perhaps in this

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

Please present my kindest greetings to Mrs. Gray every moment even before the Grays eyes thus dark. —

You will find my plants by far not so nicely collected, dried and arranged then those of my hand, but I hope, you will this circumstance not count to a certain lazyness, but only to my want of leisure and opportunity.

My typographic too kept me always behind the train, the last one of the marching party. Dr Parry rode his Mrs Smith (the name of his mule-mare) always a head and I am about to suppose, that she too got some scientific acquaintances among the vegetable kingdom, yes I am sure, that she was particularly fond of grasses, especially the celebrated Gamma grass.

With my best respect

truly your devoted friend

Arthur Schott

Dr. John Torrey, New York.

Dear Sir

TORREY CORRESPONDENCE
WE BRAINERD
COLUMBIA UNIVERSITY

To day I dispatch through Adams & Co's Express some Landscape photographs being copies of original drawings of mine. They are made expressly for distribution among my friends, who I think will have some interest in them. Special friends as I consider Yourself and Your esteemable daughters I should have preferred to furnish with some of my own hand drawings in order to present them as true tokens of kindness, but utter lack of time make such an endeavour entirely out of question and do I feel compelled to assist my

S

good will by one of the glorious results of chemical science. It would have been proper to make the selection of those plates, as I intented for each respective receiver but find this would be rather a difficult task and prefer therefore that You should Yourself take Your own choice in taking two of the lot and let Your daughters divide the rest each accepting two, if they shall condescent to do so. Besides the general objick each of the plates represents, I claim that the treatment of the scenic outfit is more characteristic and more according to reality as in most representations of this kind especially those with which the public are at present entertained by our numerous pictorial periodicals.

At despatching my little friendly missive I take occasion to assure You and all of You of Mrs. S. and my own kindest sentiments with the anticipation that these lines may find You all in best health and spirits. Even my little ones and particularly the two girls often take occasion to remember You most kindly in wearing the two State dresses, which You, I fear too liberally, sent them last spring and now form almost objects of envy on the part of their schoolmates. Mrs S. enjoins me to send her love and best regards to You as well as the ladies. Adding kindest sentiments of my own I remain as heretofore Your old friend

Arthur Schott

My dear Doctor

CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY

Yesterday the box and bundle came rightly into my hands. I beg your pardon, if I caused You some troubles to send them on. I know how busy You must have been last time, whilst moving to St. Marcsplace. Having stopped in Princeton to be some hours in company with this Lily I could spare thus much time very easy to procure both those cattis at the university, if we only had made the proper arrangements before.

In these days I separated some

Dr. John Torrey, Newyork.

few specimens Algae, collected on the Texan coast, to forward them to you for examination. If I shall have the opportunity to see you in Newyork before starting for Texas, I shall bring them myself, if not you may have them by another way.

Please do not trouble yourself about writing to me, I know too well how limited your time is and I think friends towards friends shall not keep up too anoying letteraccounts. Besides my time here, will be very short also, as in some few days we shall be off.

If Lt. Perry is in NY. please to communicate to him with my friendly regards the remark, that it may be time now, to hist up. I received some days ago my reappointment and expect to get to morrow my orders and instructions and then "God bye Washington.

As far as I understand intends Mr. Emory to start from N.Y. then You will have opportunity to hear himself explaining late & recent Commissions affaires, which are very badly cut down and at least for the moment by no means encouraging.

Our new Commissioner however seems to be a gentleman and is got something resolute in his features, I expect we can do pretty well with him.

I write also to Dr. Parry, Sandy Hill to give him short notice.

Please to take the sincere regards for Yourself my dear Sir and also for all Yours

from Your devoted friend

Arthur Torrey

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dearest Sir

You ought to hear from me a long time before
this and in fact it is several weeks since I
intended to direct some lines to You. I had
prepared for this purpose a sort of an
enumeration of all the orders of plants, which
until now are represented in my collections
by some member or the other. There occurred
however an overflow in this bottom, ori-
ginating by a sudden unforeseen rising of
the Gila. This caused a considerable in-
terruption of our officiel labors, especially
in regard to the astronomical proceedings
for the observatory on the banks of the Colo-
rado was at the time to be broken up. Though
this intermezzo lasted only some few days
the delay in its consequence could not be
omitted on account of the lagoons and old
riverbeds being all full with water, thus
intersecting all the communication with the

Dr John Torrey, Newyork

point on the river. Finally after the pathways through the thickets of the bottom had been reestablished the monstrous spectre of the goreby flood made its appearance in the shape of the terrible plague of Mosquitos. Since that time swarms, clouds of these atrocious "natives" of the soil are almost day and night in activity to show that this section of land belongs to the animal kingdom and that man has to guard, where the ruler of in Gods creation shall set his foot. No rest no leisure to write or to do any thing, because even when there are some quiet moments, the mind like the body feels likewise harrassed and depressed and nothing can be done, as to wait more or less patiently and to fight these horrible myrmidones of the air. Few days since some cool nights and windy days diminished them somewhat and thus we are able to resume our necessary doings.

Two weeks ago a Mexican party of Engineers has arrived to work on the same line, as to combine finally both the work of both parties. Whilst I am writing this now all the work necessary is pretty much finished and thus, I hope, we are able

to leave this forsaken Mosquito Kingdom, in the vicinity of which I believe to have got every thing in the line of plants, which is to be had here. The above mentioned enumeration you will find here enclosed. I send it to you, that you may be able to form some idea, to what shape finally my collection shall grow after our leaving these desolate regions. By our new arrivals I expect to improve my knowledge a little respecting the Spanish language and also by gathering many and different notes and remarks about indigenous plants. The Captain of the Mexican escorte a son of Sonora and an expert traveller through all these countries promised to furnish me with such this much as it may be in his power. Thus I shall finally be able to add to my notes formerly written a considerable number of others.

Our chief has plenty of hands to assist him in the actual Survey and thus he assigns to me almost exclusively the business of collecting for the sake of Natural-History Geology and Botany, for which I am by no means sorry. Besides this mapping and drawing remains with me and thus

S

You will easily understand, that I have always plenty to do.— The running of the line from the Initial point here South East through the Colorado deserts and the desolate mountainous regions of Western - Sonora will offer many difficulties and privations of various discription, but I hope that we all shall come through safe and sound. There is not much water on the road between Fort Yumah and those settlements in the State of Sonora and on those few waterplaces, occurring there have been living a great many travellers and emigrants this season. Hardships however are looking different, when actually faced and — this I consolate myself.

As in regard to ores (Gold and Silver), I am informed that these northern regions of the State of Sonora are abounding in and that they may be considered far superior to the mining districts of California. The great drawback with them however is the being entirely deprived of the blessings of water. This, so they say, is only caused

CORNEY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY

of their being neglected. I am afraid this is an obstacle insurpassable even for the keenest Yankee speculations. Thus far as I understand there is one great advantage connected with the prospections of Sonora compared to those of California and that is the metalliferous strata abound in regular veins easier understood and worked at by science and intelligence, then the scouring unreliable "placers" of California. Perhaps coming to the spot I shall be able to verify or modify all these sayings which seem though to contain much truth.

Since I am away from home I received only one letter from Mrs Schott, the first one she wrote after my departure. She directing to Yumah, Newmexico instead of California explains the failure of all the others. Thus I expect to find a whole bushel of old letters either in El Paso or on the road to that place. By receiving no letters is holding me in utter ignorance about all my friends and also of my own affairies in the East and it is likely Yourself know

S

more about the latter then myself.

In the place of many questions and enquirings respecting Yourself and all Yours let me put down here that single but general request, that you may let me soon hear from You and all my warmly remembered friends. I feel especially anxious to hear of how Mrs Torrey is doing. For this time I can not give You any other direction by which letters will reach me, but via San Diego to Fort Yuma, Calif. Even if we should come out of any mail communication our letters shall have plenty time to return remailed and take their way to El Paso, before we shall be able to be there. According to some few scattered and delayed news the parties on the Eastside of the line have not so very advanced as to reach Santa Cruz before our arrival at this place. By that we shall have to stay longer at this place, than we could anticipate notwithstanding the several drawbacks which we experienced since we are at work.

Since I am in the field again I have a fair opportunity to increase my collection of Spanish or rather Mexican songs. The commander of our escorte has quite a taste for them and being out here for several years, he had collected some very nice specimens of this branch of ethnography. Not musically educated he sings those fine melodies and thus I write them down. Whenever I shall be so happy again to sun myself in the circle round the fire side of Your house, I shall not be lazy to give them to You and all Yours knowledge. That little german popular song the words of which have been very nicely translated by Miss Jeannie, became quite a pet piece of the musical members of our camp. —

It is the night of April 11th which enables me to close these lines, for which there was no possibility on account of the Mosquitos.

Lieutenant Michler requested me particularly to send his best respects

HARVARD UNIVERSITY

to Yuma. The day of our leaving this camp is now pretty well fixed. The train will leave first Yuma to take the road towards Presidio del Altar whilst the surveying parties are taking a straight course from the Initial point here few degrees South of East to strike the same road about 25 miles distant from here.

Waters scarce, the days hard and many a stretch, we have to walk over deep sand. Many hardships no doubt but ~~most~~ assuredly an ample field for scientific items.

I close for this time with the best wishes for yourself and all your happy family to which I repeatedly send my best regards and love.

Sincerely Your devoted
friend Arthur Schott

Georgetown D. C. Apr. 21. 859.

PROVIDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Sir

In going over my collections I noticed among the "Lycopods" a number of species, which I ~~had~~ thought to have sent to You for Your own use. Now I am not certain whether I sent to You any of my New Granadian Lycopods or not. You will oblige me if You will kindly notify me about the fact. Some three weeks ago I also despatched the collection of tropical ferns to Mr Eaton but have not yet received an acknowledgement of their arrival. There will not be in all probability a special report on Botany or Zoology in connection

Dr. John Torrey, New York

with the survey of the Straits report except some general pages on the physiography of the country. Mr. Stichler would have been very anxious to get up all the material collected in proper shape but under the present curtailing system every attempt would be vain. I am in hope however that we will find another and perhaps more efficient channel through which matters may come before the public.

Since the 4th of April my connection with the Commission has ceased as I have got through my work. We all are not yet paid for whole year back and are anxiously waiting to see something done by the Secretary head of the Navy department of which the Coast seems to be the chief bureau.

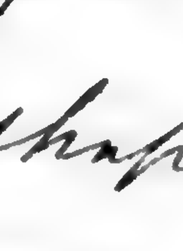

The latter is it appears bitterly opposed

towards us outsiders not belonging under his sceptre. This is probably the sole cause of the loathsome delay. We now live over a years time upon our dried up laurels.

Lately a monograph on „Polygons“ passed through my hands, when I found a genus „Rupprechtia“ figured there, by which I thought to recognize one of my tropical plants, which I met on the Pirauds. The inflorescence of the tree together with the details of the genus make me think it to be nearly allied or identical Rupprechtia ramiflora, Meyer. I here send You a dried up flower and wish to refer You to specimen No 15 of my diversae, which is a full specimen with the leaves & I believe.

Did You find among the specimens leaves, flowers & pods of a tropical

NEW YORK BOTANICAL GARDEN CORRESPONDENCE HERBARIUM COLUMBIA UNIVERSITY

tree called Prementino"? The pod is ~~leathery~~ leathery and locular flat and of this shape  ; the leaves are Zygophyllaceous, similar in shape to the food  I consider this large and very common tree to be a Phytomenace. I should like very much to hear Your opinion.

Of late I saw Vol. II. of American Boundary Reports and should be very glad to get a copy, though there is hardly any chance for it, because there are so many more influential people crying for.

I imagine the Indians have not yet advanced enough for the summer movements of Your dear family, to all of whom I wish to be kindly remembered. Mrs S. also sends her love and best regards.

Very truly Yours,

Arthur Schott

GRAY CORRESPONDENCE
HERBARIUM
OF THE UNIVERSITY.

My dear Doctor

Your letter dated June 17th came to hand in due time and was highly welcome. Your views about the botanical extra plates (Cactaceae) should be regarded. I will try however to get You at least one set, provided I shall be here in the time necessary for the purpose.

I left yesterday a small bundle plants with Professor Baird requesting him to send it on to You with the first opportunity.

The collection contains a mixed assortement of european duplicate specimens taken from my herbary.

I have to remark however, that it was not my intention to com-

Dr John Torrey, New York.

municate to You a choice selection by it, which would not be possible for me, but as You write to me, that You sometimes are interested to have a look at the most common thing I send what I can spare without much discrimination. I think You will drop under your table that which is mere hay or dry stick.

Many of the specimens are less nice as it would be desirable, because I collected a great deal travelling on horseback. The larger skulls is still to be drawn out, which I do whilst I am going on in reducing the size of my herbary. I wish to have it in order before October, the time I shall have probably to leave my family again for some months to join the expedition on the bottoms of Darien.

I would like to have some advice from You in regard to collecting plants in this interesting region. I know Mr. Holton did more there then I shall be able to do during a sojourn of few months only. As the country however is not so full well known, I expect to find at least something. Will You favor me with Mr. Holton's direction I should like to write to him on the subject.

HERBARIUM UNIVERSITY.

First I did not intend to go out again, but as it is only for one season, I will set my sail upon the tropics.

When I was last in New York You favored me with a copy of the report on Capt. Popes plants asking whether I should like

the plates to it. I of course agreed to it, as the price to you told us at the time is very reasonable. So if it is not too much trouble for You, please remember me with these plates. —

Whether I shall be able to visit the eagles nest with Mrs S. this season I doubt. Our little Sovereign is cutting teeth and troublesome and would be more so on a journey.

I expect by this time Your house in the city is a bachelors hall again "the flowery souls are out." I Sympathize with Yourself and Hastings but pray nevertheless to give my love to all of them and receive my most sincere regards for Yourself from Yours devoted friend Arthur Schott

COLUMBIA UNIVERSITY

Dear Sir

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

In my last to You I was not able to write any thing about the botanical collections, as at that time nothing had arrived here. Since every thing came safely to hand, with the exception of one bundle of plants, which was injured to some degree by water, whilst we were in the field in the Sonorian deserts. There is however no serious loss to be regretted. Immediately after receiving my collections I pitched out every thing relating to the line of Cactaceæ sending them to Dr. Engelmann. In regard to the main of the botanical collection I did not find leisure enough to separate all the duplicates or even number all the specimens which must be done, before distribution for examina-

Dr. John Torrey, Newyork.

tion. Before I am able to do so, I would like to hear from You as how You wish to proceed as this last portion of the Boundary collection. I know that Your time is very precious, which is the same with myself. I therefor think it advicable to ask You which orders of plants will be examined by Yourself and whether Dr. Gray is occupying himself with others besides compositae. By knowing such I would be able to make a sort of a preliminary or better partial collection of specimens to be examined, so as to enable You to go on without any further delay and at the same time not taking too much of my official time, at present fully and variously employed. Plants already known, I could omit to send on so not to increase the bulk of the greathandle.

The specimens of Geology are already arranged partly to be sent to Prof. Hall and partly to serve for myself as items for my Sketch of Geology, which I am on now to write.

Since I wrote my last to You I took quarters in Georgetown, to have it quiet for my period purposes. Mrs. L. who is fond of housekeeping takes good care of myself and of the house and so we live together in best peace and happiness. Her health weakened by long and continuant fever and ague during the last summer in the West is returning again and I have best prospects to see her rosy up again. She does not know I am writing to You or she certainly would send herewith her kindest regards.

In case of any botanical drawing to be done, be it for the Boundary Commission or for any other purpose I should like to do such pleasure hours. If You have not a better hand for it to Your disposition please remember me.

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

What news have You got about Your own family? I soon shall have to write to one of Torrey friends as to hear something. How is this Maggie getting along will she return soon. I expect she enjoys a great

deal of pleasure in old Europe.

Shall we not have the pleasure to see Yourself or one of Yours during this season here in our vicinity? Give to Miss L & J best love and regard and please tell my friend Herby occasionally, that I got again on my last trip several curiosities again for his cabinet.

Please believe me

Yours sincerely devoted friend Arthur Schnitzler

FAMILY CORRESPONDENCE
DE BAPTIUM
OLUMBIA UNIVERSITY.

Camp opposite Fort Yuma
I. 18. 1855.

My dear Sir, It was quite a bad arrangement I made, by requesting my friends in the States not to write to me to this place, for fear I should possibly this station before such good messengers would be apt to reach me. We are still here and letters following me, would have had plenty of time to come to hand. Complains about this matter together with the continuant not receiving of even a single line from my dear wife — are useless. — Our official work has fairly commenced, the necessary forelabours are made and the survey around here is finished. Now whilst I am drawing the maps, the triangulation after a laborious establishing of a baseline is going on and also a pioneering party has started yesterday to run a straight Southline below this, where hereafter the Initial Point of the queer Gadsden line will be fixed. After finishing the maps, we shall leave this place entirely in two separate parties. The one triangulating the Southline mentioned before and the other running a line by means of compass and chain along the river to the vicinity of that point, where the 20 miles Southline will have to intersect the Colorado.

As soon as such shall be achieved, we will have possibly to make a reconnaissance

JARVEY CORRESPONDENCE
COLUMBIA UNIVERSITY

Dr John Torrey. Newyork.

down to the Mouth of the Colorado, though this I am not yet certain. To run the mainpart of the line will ~~the~~ comparatively not take so much time as our preparatory work does. Some portions of the country, we shall have to rumble through must be after all accounts a pretty much forsaken spot of the globe and the work probably will have to be ~~the~~ hurried on, some other portions however are better spoken of and after all those often repeated bad tales seem to us now, being near ~~to~~ by, — much exaggerated. We will go and look. — In the line of my other collateral engagements for the sake of Natural History Geology and Botany I was and am pretty busy too. I only would have wished for a more favorable season to cross the first part of this Continent, that is from the Pacific to the headcountry of the Californian Gulf. Desolate, void and apparently unfinished from the hand of nature this country is offering a vast material of the highest interest for every branch of philosophical and generally physiographic sciences. If I only should be blessed with 48 hour per diem, I would be able to stir up many a question not yet satisfactorily answered. A german proverb however says: „A fool is able to ask more then the Wise can

answer 7 and so better I do not make too many questions and enquirings.

Before we shall leave this place I will try to lighten my cargo of collections and send a box on via San Diego, Isthmus &c. to the States. If I shall find time I will have to add a collection of plants, which I gathered from San Francisco along the coast to San Diego and from there across to this place. I did not hesitate to put in also Algae, which form quite a conspicuous part in my collection because for phanerogamous plants was during this season not much chance. I got also some „Lilies" among which however can not expect any novelties and so the specimens may only serve for the knowledge of the distribution of plants. Among the Phanerogamae the Leguminosae and of course the Compositae have to tell a much longer yarn than any other class.

However poor the collections of such regions and at so unfavorable season, may fall out they offered to me a great deal of interest in consequence of which I had to put down many a remark.

In the very neighbourhood here I discovered lately growing on barren diluvial hills, (probably ancient Colorado bank) two trees belonging to the mighty class of Leguminosae.

With none of them could I find a particle of blossom or fruit. The one is called by the Mexican Arbol de hierro (iron tree) for its wood is the hardest known in the country. The Mexican use it for making stirrups and other articles requiring hard wood. I am assured by one of the botanizing officers at Fort Yuma (Dr Barry) that the tree is bearing a yellow papilionaceous flower. As the tree is said to grow abundantly further down the country I shall take care to secure, what is necessary for examination. The other tree resembling the Mexican „Retamma" in habitus and even in its green bark. I could not yet any name for the one here, but I surely will know it. All the other trees and quite the mainpart of more conspicuous plants I think to recollect well as inhabitants of the regions from the upper Rio Bravo down its marshes.

I omit to ask here many or any questions about Yourself and all the dear members of Your all the time well remembered family. I hope and wish most sincerely that these lines may find You all in best health and spirits. And I anticipate at the same time that Yourself and all Yours may keep me in Your good kind remembrance to which I also recommend Mrs Schott, of whom I never heard or saw any sign since I had to leave her in Ohio.

Sincerely Yours:

Arthur Schott

CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Sir,

Just I receive Your kind letter dated Jan. 7th 1854. The postoffices seem to be not very mindful to deliver letters even after receiving the full address.

I am glad to have Dr. Parry here, he assists me in assorting my geological collections at the Smithsonian Institution and also in selecting out some few to be sent to You for examination.

Among other things I brought home a collection of seashells gathered on the beach right in the neighborhood of the Mouth of Rio Bravo. I made this collection for the purpose to compare the living with the fossil shells, which occur along the valley of the Rio Bravo. As I do not know who shall or will examine them Dr. Parry advised me to ask You about, which I do as always most cheerfully.

In regard of the duplicates and triplicates of my plants I shall have to do, as You told me in Your letter, though for this I want some more leisure

S

Dr. John Torrey, Newyork.

as I have now. For forwarding of the Cactaceae to Dr. G. Engelmann my best thanks. I wrote lately to him giving some [over] amounts of my limited Cactus knowledge. I use every day some few leisure hours to finish several sketches of a Cacti. Thus far as to enable Engelmann to use them for studying.

Prof. Bird told us the other evening ~~that~~ his hope about an approbriation, which shall furnish the Smithsonian with the means to have all the plates engraved on copper or steel. This indeed would be a great improvement, as engravings on stone are never so perfect as the former.

Maj: Emory's shew me some days since one sheet of the plant drawings done in Paris, which I think are very nice and good. The lithography did not approach it, though it was not a bad one.

In regard of my coming to New York and ~~to~~ Albany I do not see, how it shall be possible now. I of course should have the greatest pleasure to see Yourself and all Yours soon again and also it would of great interest to make the acquaintance of Mr. Hall, talking with him about the Rio Grande Valley. Maj: E. assigned to me also a paper to be written by myself on the geological

and also botanical features of those western frontier regions. Therefore I hardly believe that he should give me new leave of absence for the purpose. I am at present a little angry with the Mg: and feel mortified that he now abuses my sketches. He is giving them to another draughtsman, who may have able abilities with me but who never was out in Texas and can for this reason not be able to finish those sketches as they ought to be done. I close in this way my interest for the matter and look on this Report to more or less as I did always on the former ones. A bundle of worthy documents but very inefficiently and unworthy illustrated by so many plates of [illegible] value.

TORREY CORRESPONDENCE
ILLUSTRATION
COLUMBIA UNIVERSITY.

What You say about the output and arrangement of our collections in publishing them I agree fully and shall submit to every thing, if it is only for true purposes.

About Mr. Carl Schultz, whose personal acquaintance to make, I was prevented when I was last time at Newyork, I wrote the proper remarks on my mind. For the moment however I have to wait for a more favorable time, to do anything practically.

I believe, my dear Sir, You would do very well

to give occasionally to the Maj. some notice of it. It is already pretty certain, that I new Boundary will have to be established between the Rio Grande and the Pacific and as real good working hands are scarce article here, I should think there might be a situation for Mr. Schultz.

In the line of officers I hardly think, that there will be employed an other individual besides those already engaged. Whatever the aspects will be, You may be sure, that I shall do what I can.

With this take my best wishes for Yourself and give my regards and love to all Your kind family.

Sincerely Yours

Arthur Schott

Gen. Campell, Commissioner told me yesterday as pretty sure, that several parties will have to go out again on the new line. No doubt there shall be wanted considerable more useful hands for the Survey. I hope there shall be also a chance for Mr. Schultz.

Dear Sir

This day a box containing the botanical collections made by Capt. C. R. Smith U.S.A. and myself through Sonora & Chihuahua will be dispatched from this office under Your directions. I was sorry of not being allowed more time to arrange them with some more care and knowledge as I really did do. The larger portion of the collection made by myself You will find arranged the genera brought together into their orders. I also numbered all the plants so that they have now reference to their respective duplicates and

(

Dr John Torrey, New York.

triplicates, which will remain at hand here. Some specimens You will find poor enough or ### only defectively represented, some You will find spoiled and some You will miss entirely by their numbers. Of the latter class are such, which had been sent to You already by Prof. Baird of the Smithsonian, to whom I had dispatched them from Fort Yuma as a collection made on the coast and through the southern portion of Upper California. The defective and poor specimens You may excuse with a long and weary transportation and also with the various circumstances under which they have been collected.

With the plants I gathered a great number of notes and remarks, which to extract however from the body of my journals I can not find leisure at present. Being asked to do it now I would have

to sight the matter, thus I have to leave this work for a better time, when I shall be less pressed by other work. In regard to my formerly written notes on plants of my collection I believe to be able of making some more worthy additions and corrections and at any rate I shall be able to make them more complete by not collected during my last trip.

By this time Your family will be established in the country already and Son probably will keep „ bachelors hall " with Hastings. again. Heaven grant You all good time and let remain healthy and in good spirits.

COLUMBIA UNIVERSITY.

My dear Sir

After coming so far with my preparatory work respecting the botanical collections from the isthmus of Chiriqui. I placed to day into care of Prof. Baird a second package of cryptogamae for You. This one contains towards 80 species and genera of „Silices" which I trust may contain some very interesting and perhaps novel forms. You will oblige me if You could identify any of the numbers and communicate them to me.

Have You got access to good modern works on ferns. I am a

Dr John Torrey, New York.

little afraid to find myself here and in Washington somewhat de-
prived of good opportunities for ~~the~~ Congress Library, I understand, is rather exclusive. The set sent to You is intended for Your own library. and so is the first package containing the Algae of the beach at Cartajena, which may number upwards to fifty. I sent already a more complete set to Dr. Harvey Dublin, by the Smithsonian Institute. Some of the Chlorospermeae I identified already by means of this savants — Vol. III of the Nereis boreali. There I found my name doctorified an honor to which I came thus undeservedly as unforseen.

In a few days I expect to have prepared and numbered for You a set of the phanerogamae. I am sorry to say however that it will hardly deserve the name of a collection. It was that portion of my gatherings which suffered the principal losses. ~~To~~ I regret this the more as the most interesting sections of the country in question remains concerned with this deficiency. It is also a very poor consolation that such was not caused by any lack of attention or labor on my part. In the course of our examinations I shall be able to make some additions to an enumeration by means of my notes, sketches and even memory. Only time will be required.

The affaires of the Arctic Expedition are still in suspense, the Secretary of the Navy having made not yet any decision. Michler at present is absent at his home in Easton, Pa. This officer is determined not to be subordinate to Craven and has the promise of the Secretary of the War to be assigned. So it may be at some day the concern separated, Michler reporting to his own department under an appropriation for his own.

ISAAC MAYER PEIXOTTO CORRESPONDENCE
HEBRAICUM
COLUMBIA UNIVERSITY.

My dear Sir,

Yours dated June 10th came duely to hand and was most welcome. — By Dr Parry's matrimonial affairs I was quite surprized, for I had not the least idea of it. I never thought about whether he should have any dear Jemima in his mind or not, considering such an entire private business I do not take much interest in such matters, however wellwishing I feel towards every body and still more so towards friends. Thus far as I know good Dr. Parry I feel pretty sure that he understood his necessities best and was smart enough to make a suitable selection for himself. In his letter to me he stated, that his marriage shall put a stop to his roving life, which he was, as I always thought, never very fond of. I have no doubt this young husband will cherish the jewish law very much and earn its benefits. My wife also became very fond of it since she heard You mention it. I believe You won a part of her good heart for that. I understand the good and the reason of this law very well and would not hesitate a moment a to comply with, if it were not for the circumstances I depend on. I expect however if I shall have to go out again, it will be for some time until we shall have to part. Mrs Schott though very warm minded is thoughtful and religious enough

Dr. John Torrey, Newyork.

to bow cheerfully to that what is necessary.—

In regard to the manuscripts referring to the Texan plants, I think it shall not be any disadvantage to them, having made back the trip into my hands. Since I have received them some additions were made thus far, that is some few days the whole of the „ Collectors Remarks " will be done. If I understood Mr: Emory right the Botany of his Report shall not come first and so I shall have still more time to read my works over, to augment and to correct it.

To copy them right away for cases of accident I have not leisure enough to do it now, but if I should have to leave the field again, I shall place them into your hands, either to correct and to commit them with the descriptive portion of the work or to give them to me again for more probable additions.

Those few sentences concerning Cacti I shall send direct by to Dr. Engelmann.

Lieutenant Whipple brought some nice living specimens of Cacti along, which are now in Mr. Breckenridge's care. Dr S. W. Bigelow probably made again some nice collection in the line of Botany, as I conclude, but I think he had held them under his own care. I have no doubt he will bring them along with himself, for he is expected here together with the collections. I have no doubt whatever that You shall hear from him at the time of his arrival. A german draughtsman having been with the Lieutenants

c.

party told me, that the Doctor was not yet satisfied with his collections after having arrived at the Pacific, but he went back once more to the Sierra Nevada. This is the cause of his being detained in the far West. There may be still an other cause detaining. perhaps the poor Doctor is his home. An acquaintance of mine saw here in a paper some time ago an account of the dead of the son of a Dr Bigelow in Ohio, by the exploding of a canon, when firing some salutes. I do not know whether it is the unhappy boy formerly connected with the N. Boundary Commission. If so, however sad for parents to loose a son, to loose such a one, would be only a release, for he shew himself worthless. —

Mrs Mrs Torrey and the young ladies are enjoying the country and I hope they all will recover their good health and high spirites very soon again. I did not know that Mrs Torrey recovered her strength so very slow. Miss Eliz letter informed me on that matter. Yourself and Mr. Grant are keeping up now „Bachelors' Hall.' I do not know how You enjoy it, but I think it is good enough that the „Frauen" are not far off, to have sometimes a glance into the rosegarden of family life.

Mr. Hooton, I suppose, will not be through yet with arranging and numbering his plants, which must be very interesting to look at, especially as the country, where he collected, is one of the most interesting on this Continent. Please give to him my sincere regards and

S

tell him, if You please, that we are here still in possession of Mexican Tea and myself thus well as Mrs Schott should feel very happy, to see Mr. H. again at our little table.

Mrs. Schott grew very fond of all my doctorish acquaintances and friends, a fact which makes me always very happy to think of.

Some of these days I shall get through with my Geological report, which I have to prepare to say something about the lower Rio Bravo.

At the same time I am also very busy in inking all the Sketches, which I made, when operating in the fields. I feel confident, You would like to look at most of them, as I deposite there rich studies about the character ~~of the~~ and physiognomy of the Flora of Western Texas, an object which I find thoroughly neglected in the illustrations to our Report in Spe, which otherwise will be arranged and appear in a very nice Style.

For this time let me close, please give my friendly and sincere regards to Mr. Grant and take all my best wishes for Yourself.

FAMILY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Sir

I hope you will take it as neglect that I did not write immediately to You after my arrival at this place. I always expected to hear some news in regard of the Commission-affairs but all in vain, it is all the same with as You already know and as Dr. Parry probably has told You.

As I until now understood the Commissioners will be turned out, for which I am not very sorry, though I never saw him. I am pretty much aware that only his management brought the commission in such a disgraceful fix.

Some days ago I received an official communication from their

Dr. John Torrey. New-York.

ausing to delivers all the collections
of specimens, notes, sketches, drawings
&c. not belonging to the Survey into
his hands. With the intention, not to
give up any thing, I wanted to see him
but I had not the pleasure to find
him in his office. This was before
yesterday and now the new adminis-
tration is in action, and I have patiently
to wait on what is to be done.

As there is no work to do for
present, I could have taken the
route for Newyork to pay a long
desired visit to all my worthy
and kind friends there; but I
think it is for all events better to
be for this moment here, for I sup-
pose, the matters of the Boundary-
commission soon will taken up.

Moreover in regard of money, I
am entirely out off. I was not able
to purse a single cent.

Just now I receive your kind letter
d. d. 3th of March and also in a very
welcome company, for all them I am
very much obliged to You...

I find yesterday a real glorious mo-
ment to see the act of the presidents
inauguration. What a moment to see
the man elect laying down the oath
before the people. How poor those
foreign policemen & spies looked, ap-
dressed in Spanish uniforms of bond-
men. In the speech, the new president
held, there is after my opinion life
and heart. God bless him for the
peoples, mankinds and freedoms sake.
— In regard of your studies about
our collection in botany, I am very
glad that Dr. Parry will be with
You. I should feel glad if I at a
time should be able to assist in any
way. There is now nothing to say, all
is yet dark and chaos, but I hope
soon it will come out straight, that
an honest man may follow the tracks
to achieve at least something.

With the engravings of Stansbury is
sattla Kepelkins I am not satisfied
at all. They have been executed by
this loathsome Ackerman just as I
was afraid for. I am therefore glad
not to have my name under the
work. It is no genius and no love for
the objects in the whole execution.

It is a shame for the government
of this country, that such public docu-
ments, reports &c are always illustrated
in so mean a way.

If You please give my best regards
to all your amiable family and take
also for yourself all that You may
expect from a sincere friend.

Truly Yours &c,

Arthur Schott

HERBARIUM
COLUMBIA UNIVERS

Fort Duncan. Texas. March 20th
1852.

Dear Sir, It is a long time since I never found leisure to direct some lines to You. Had I not to expect soon to leave off from this place perhaps I had omitted even today to write, for I straight always more and more to increase my knowledge about the surface of this part of Texas. When I got my appointment as assistent Surveyor to this line, I felt not a little uneasy and quasi disappointed, because a great desire to come further and even to those regions, we were speaking about in your study. A Sailor has always to regard the wind and thus am I and so left I the vicinity of El Paso a-gain after 4 weeks sojourn, as you will already know. The trip back through those most desolate regions I had passed through but 4 weeks ago, was against all my ex-

SURVEY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY

expectations more interesting as first. I rode through mounted on a small mule and almost all way long devoting my attention to Geology and Botany. In the latter section was of course not much to hope, season was too late and too early. I made notwithstanding many remarks, partly new about such objects, I had missed, coming up and partly ascertaining and affirming formerly made notes. I paid particularly some attention to lines of demarcation for some trees and shrubs and made besides a great many studies about more strange looking shrubs & trees & other plants, perhaps of some use afterwards for drawing.

Arriving here we got into a pretty lazy life, that is in regards of strict business, for to me would be the severest punishment to be ~~HHHHH~~able to do ever any thing what it may be called.

On the road I picked up some of the earliest springs- messengers, but deprived of every book, I was

oxial. Orchardij.
Calycia pumila

Ten Fiveto," I can not tell you the names.
A Baileya (after its outer habitus) stood
in bloom all winter long, as I noticed
on the valley of the rio Bravo. also an
Artemisia, of a most graceful habitus
like our european A. pontica and some-
what similar to A. camphorata. The
highest point on our route not far from
the head of the Limpia offers a grand
mountain scenerie and besides this an
ascertaining botanical proof of the
height of this place. Dr Parry found
here first a pine tree of which he
was told the mexican "pinones" are
the fruits. I think he designed it in
his collection with P. edulis Engelm.
The seeds a mexican delicatesse are
great article of trade of which Santa
Fe is the main place. Coming into
the limestone formations of the Guada-
lupe mountains I found the plants
more advanced. Especially on the
San Pedro river, where I ~~had~~ and 2 sp.
results one of the Opuntiaceae & a Rhod
~~had~~ had to put in paper.

Now here it is the spring in full speed
and man can scarcely find time and
leisure enough to go after all the

botanical beauties. I am sorry to say now because I am a stranger for this flora and to me is almost every thing new.

In the latter days I had to wonder what nice and graceful shrub the Larrea is. In its inflorescence is a peculiarity not given in the engravings of Report and that is the petals are all vertically annexed, that one margin is looking up and the other down, (nearly like the waterwheel of a propeller. In the very neighbourhood (oolithic formation) are some coalmines of better & meaner quality. I found in their neighbourhood some pretty plants as a very delicate Linum, a Lupinus and if I am right that shrub Dalea formosa with its most beautiful flowers.

The flora here seems to be exceedingly rich on plants for [illegible] and medicine purposes. I collect notes and remarks for this season as much as I am enabled to get.

Perhaps I will have opportunity to send you from Laredo a collection of plants. However I shall always be happy to something useful. Until I will have next opportunity to write to You my dear Sir I pray You my sincerest respects and so I am

Your devoted friend
Arthur Schott

HERBARIUM CORRESPONDENCE
THE HERBARIUM
COLUMBIA UNIVERSITY

New Orleans Mar: 8th 1853.

Arr! May 20. —.

My dear Sir

After a pretty troublesome working ahead by railroads and steamboats I arrived yesterday morning 8 o'clock safely in this City. Maj: Emory whom I had missed in Cincinnati did the same on board of another boat and thus almost all the chiefs and subchiefs of the unhappy N. A. Mexican Boundary Com. are here. As there is only one steamboat between here and Brazos San Iago we are obliged to leave quick again on Tuesday (10th) for that place, without having much time and opportunity to do much good here for a proper outfit. I am afraid the same curse rules over this new created Commission, which caused so much dissatisfaction with the late one. Maj: Emory feels still not quite well, though it seems to me as his mind were irritated by the too severe cutting down the Commissionsaffaires and thus he feels bourspirited and more sick as he really is. Of course this is only a supposition of mine. — Now parting again from civilized life, I long to come soon ~~I~~ into the wilderness on the Rio Bravo, for there I

S.

Dr. John Torrey, Newyork.

feel less lone as I do here among that bustle of money-
making life and connected and near to so many a person,
for which I can not have much regard or sympathy. Out door
in the open nature and freedom I am almost thus much
at home as among good warm sincere friends. It is certainly
a fact, though by very few acknowledged; nothing is so
true as the spirit of nature. Intercourse with it is one of
any conditions of life.

Dr. Parry has not yet arrived here and I am afraid
he will be too late, for he supposed as we all ourselves
did, that we should have to stay here at least a week.
If I do not see him here, probably I shall not see him
until after finishing my work from Laredo down to
Brigadier Barracks. To day I received a letter from
Dr. I. M. Bigelow. He expected to see me in his home at
least for some hours, but as I was engaged to travel
along with the Maj. I could not stop between Ny.
and Cincinnati. He also anticipated the pleasure
of seeing and meeting all us, that is Yourself Maj.
Baird, Dr. Parry and myself at Cleveland, where
a general meeting of Geologists & others soon shall
take place. About three expected 4 boxes containing
a part of our Santa Rosa collections, Dr. Bigelow
also has not yet heard any thing. There is connected

S

with them a box with living Cacti to be sent to St Louis to Dr. Engelmann. I myself there is no other cause of delay to be afraid of, as that Lewis & Grossbeck in San Antonio did not forward them in due time. I this determined much annoyed by the late glorious commission by not being promptly paid for. Received the boxes not with the utmost pleasure and thus I think, the boxes were safely stored away, until advices were got at San Antonio that all the payments for the Boundary Commission shall be made.

About the contents of three boxes I addressed to the Smithsonian Institution I wrote a memorandum-note to Prof. Spencer F. Baird, explaining how he may direct the various portions for examinations. Thus the silver- and lead-ores and coal shall be sent to You; whilst the duplicates- & triplicates of plants may remain on storage until I return. — To Dr. John Long, residing at Santa Rosa in Mexico I shall write from Ringgold Barracks or Laredo, to procure a small specimen of that native-iron, I spoke of to You: I hope I shall be able to get it, though such matters are pretty tricky to be pursued in those regions of the world.

For this time allow me to part again from You and take the assurance of my most friendly regards for Yourself.

Please to remember under Your many and various engagements and occupations

Yours devoted

CORREY CORRESPONDENCE
UNIVERSITY
COLUMBIA UNIVERSITY

Rec'd. June 27 -

Georgetown D.C. 16. 858

Dear Sir

CORRESPONDENCE
SMITHSONIAN
GEORGETOWN UNIVERSITY.

Your kind letter reached me day before yesterday and it was thus welcome as it was unexpected, for I had an hour fixed already in which I wished to take the great pleasure of penning You some lines of regret on my part because I had not been able to drop into your office in due time. My heart was and is still full with matters, which I am very anxious to talk and chat over with You. I do not despair however that this will be possible soon. As You will have learned by Miss Eliza how the engineering parties got along on their route over the Isthmus of Chocó I do not think it necessary to repeat anything about. The treatment on the part of one of the superior officers was more then injudicious and I believe not to say too much if I assure You that within myself the moral and official man is equally offended by that certain officers conduct. I also have ~~no~~ to regret more particularly the much reduced opportunity to my command for collecting specimens of Natural History and also for transportation and safely after being collected. Among other things I have to

Dr. John Torrey, New York.

mourn the loss of a large portion of botanical ~~collections~~ specimens and written and sketched notes. The loss is the more serious as I was not able to replace it any way during our returning trip down the Atrato river. The banks of this beautiful stream are the richest region travelled over by myself and would certainly have afforded a great deal of interesting matter. It is now of course not time to complain about things, which are not to be altered and so I shall only give You a brief account of what I still remain on hand. Of Cuba and there is in a collection of very interesting Algae many new things at least for myself and also from same neighborhood some interesting things of phanerogamae of the coast region. From the Gulf of Urabá (Darién) several specimens especially Ferns were collected. The latter class is most profusedly represented all over the whole route the highest elevation of which does (I believe) not exceed from 1200 to 1300 feet. This multitude of ferns seems to class the flora of lower Chocó with that of the West Indies. In one of the highest localities surveyed one species of tree fern was seen and collected in good fructification specimens. Without having counted them I should think there are some 30 gen. & spec. of Filices in the collection. An other characteristic of the flora is the deficiency of Cuticeae, for only 4 (gen. & spec.) came to hand. Orchidaceae are well represented, also Aroideae, but the specimens which had been ~~saf~~ sapled are naturally not good looking. The continuant dampness of atmosphere of

the country is a very serious drawback on collecting matters. Leguminosæ act an other very prominent part on the surface of Choco and it were the Astralagus especially, which offered the richest treasures in that line. The palms of course belong to the capital things in a tropical country and I devoted especial attention on them. They are not much fit for herbary specimens and very hard to study because they are less accessible and also they are rather reserved in showing their floral parts. I succeeded however in collecting 70 different palms for the sake of their habit to which I may add a number of interesting notes. — Besides Zoology and Botany and even Ethnography I employed myself much in drawing scenerie sketches and panoramatic views as to give to the public a most faithful representation of the country if required. — How do You like the landscapes of Sonora as I finished them in those outlineviews in the Mexic. Bound. report? I should have liked very much to give you the names of those odd vegetable creatures of ~~Mexico~~ the Western wilds. This I may do once, when I come to New York again. This kind landscapes ought to be accompanied by a small explaining content, which I once proposed to the Major, but he was all too much hurry. In regard to the 2d volume nothing seems to have been decided upon. I hope it will not be lost for the scientific world.

I was yesterday to see my chief Mr. Mühler but could not see him. He reported in person to the Secretary of the

S

Navy and I am anxious to know in which way the reporting work has to be completed. I must confess I should not like if Meihler would lay down his command, while he is resolved to do in case Lieut. Craven should receive any superiority over him. This however, seems not to be very probable.

On my warmly longed for safe arrival at home I had the great pleasure of seeing all my little family in good cheerful health. My younger daughter Melita pleases me exceedingly by her good humored cheerful demeanour. All the businesspeople of our neighborhood that is those who must understand it best, the ladies, called her "a real beauty", "the fairest child" &c. &c. The wilderness of Choco left so much politeness with me that I do not dare to doubt these epithets. Mrs Schott who thanks You for the kind remembrance bestowed upon her, asks me to forward her kindest regards for You, which I herewith wish to do. She herself after botanists fashion calls the later arrived little stranger Melita Schottii. I am sure you will find but light to delight in such a sacrifice name.

Please give my love and best regards to all the dear members of Your worthy family and accept the best wishes and regards for yourself from Your

TOWNLEY CORRESPONDENCE

devoted friend
Arthur Schott

Pray do not forget to send me a few words about the Navy, as soon as you have anything definite to tell me.

Georgetown D. C. VI. 5. 858.

My dear Sir

I feel much mortified of having Sir thrown unintentionally deceived again by announcing Sir the despatching of two more bundles of New Granadian plants, which I intented to send by E. Serrell Esq. After having mailed my last I went to the Smithsonian to take back those bundles, which I long ago had placed into Prof Baird's care. They could not be found however and must have been stored away somewhere. Whilst looking for them all over the building, I found to me regret also a third bundle of plants, which I had placed into the same hands about a year ago. It contains european continental plants, duplicates of my herbary, which I had

Dr. John Torrey, New York

promised to Sen long ago.

I feel sorry about this thing but for the moment I can not help it.

Thus soon as I can get the misplaced bundle to hand again, I will transmit them Sen by a surer opportunity.

Sincerely Yours,

Arthur Schott

SURREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

Rancho Jamacha. 13 miles SE. of
San Diego. Nov. 13. 1854.

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY

My dear Sir

The time since I left Newyork seemed to me twice as long as it is in reality, for hundred & thousand sights of the most different nature have been passing before my mind, which unceasingly is taking always pains to mark down all that is worth notice. Since we left San Diego to live here in camp it is the first time I permit myself to sit down for the purpose of inkling some of my thoughts upon paper, which I wish to direct to my far off friends. All the annoyances of steamboat travelling, (Camplife is delight) are nothing compared with the slowly but surely accumulating pains caused by the want of hearing of those we hold nearer to our heart under the sun. I did not receive yet any line from the East, thus the poor rambler has to content with the firm belief that all is right and according to his wishes.

Dr. John Torrey, Newyork.

Thus I hope that these lines may find all my worthy and often remembered friends in 8th Street M.J. in good health and good spirits. May it be in the will of divine providence that I find them all in that happy relation-ship in which I left them behind to part for some time with civilization and home-life.

With the last mail I had the cheerful opportunity to send a letter to Miss Eliza, which, I hope, will have reached its address by this time. Since that time I had some leisure to volunteer around San Diego and this place opening the eyes for Botany, Geology and Natural History. There is rather a poor chance now to collect any thing not only on account of the late season but also on account of the meagerness of the country, which seems to suffer under the course of a general drought. The mountaintops at this time, nourished by those heavy fogs, which old father Pacific during the night is sending towards this continent, are the only spots where something is to be looked for. On the other side it is the sea-

shore, where under the motherly care of Nereis some botanical treasures are brought up. Under these circumstances Algae, Diatoms and some few Phanerogamae are the only plants I could get hold of until now. Spring however will set in soon and then I shall use every opportunity to put up a little collection, of which I can have no conception at this time. As a general remark about the physiognomy of the vegetable kingdom, in both in the physiologic and systematic line, I find that there is a great similarity between the vegetable cover of the lands along the Rio Bravo and the Western coast of this Continent. A certain peculiarity, which I think is based partly upon a corresponding latitudinal distribution and partly upon similar geologic conditions ruling throughout both these different regions. How far this remark may be true, detail-notes will have to show. Glances upon nature of this kind, I consider now as the only reward, which I may receive for my labors during this trip, for in the line of discoveries, I do and can not expect any thing, going over a ground,

C,

which has been travelled over in almost every direction by other men, more able and favored by circumstances than myself.

In regard to my health I am fortunate enough to state, that I find myself very well, for simplicity in living, activity and day and night open air are the things agreeing with me perfectly. I wish only that the beloved and esteemed partner of my life may bear the pain of separation thus pious and brave as she promises to do. If heaven will bless me thus far, that I shall have to live longer, I hope to be able to repay Mrs Schott for that she is suffering now.

KREY CORRESPONDENCE
COLUMBIA UNIVERSITY

I need not & to beg especially permission to recommend Mrs Schott into your kind sympathy in the case of any casuality I should have to submit myself, as all mortals have to do, whilst living in the transitory state of this subluner world.

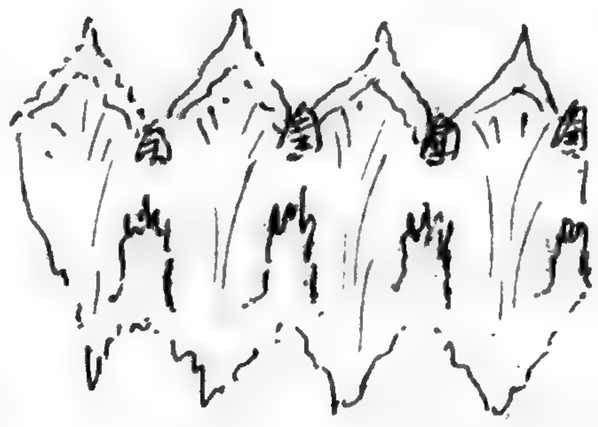

I close for this time to direct some lines of remembrance to Mrs Torrey, who, I trust, finds herself in a good and better state of health, as when I had the pleasure to see her up on the Hudson. Please receive the best wishes for Yourself from Your sincerly devoted friend Arthur Schott

Washington Sl. IX. 9. 856.

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

Dearest Sir

Please receive with the enclosed some few of the best flowerlets of the questioned Cuscuta subinclusa Dur. & Hilg. Thus far as my investigations reached the parallelsided scales represent themselves thus. What I shou-

ever could actually see was very imperfect and I should like to hear from Yourself how You look at the objects

By this time You have probably received already a visit of Dr. Engelmann and may have arranged matters as to place into his care the examination of some of the genera of our collections.

Dr John Torrey. Newyork.

In regard to some endogenous plants namely the Yuccas I have some material for information in my possession, which I shall have to transmit to You thus soon as finish the drawings of my topographical views. I think it would be a good plan if we could persuade Mary Emory to send me about November to Newyork for one or two weeks. I think the work of adapting and embodying my botanical notes with your content would be promoted best in this way.

If Dr. Engelmann should come on to Washington before I shall have the pleasure of seeing You, I should like to receive by him ~~my~~ the manuscript of my former by written notes ~~of~~ on the plants collected by myself. I have quite an ammount of material and may cut off some useless parts of the former.

I close for this time. Pray, give my best love and respect to all of Yours and Yourself.

Believe me very sincerely Yours

Arthur Schott

My dear Sir,

Quite a misfortune kept me a-
way from you in the last moments
before I was to go on bord of this
steamer. Thus I was deprived of a
last greeting and handshaking. The
cause of it, you will know by Mr.
Hastings, who handed to me a letter from
the Smithsonian Institution, with an
enclosed draft. The signed receipt
I have to send back from New Orleans.
This affair is then cleared and I
am happy, not to trouble your
kindness heretofore farther.

I feel myself besides this so
deeply indebted to as well to You
my dear Sir as to Your whole

S

Dr John Torrey, Princeton N.J.

kind family, where I experienced
so much friendship, that I am
scarcely enabled to think, by what
means and whenever I shall be
so happy to return you in answer
of them even a smallest portion of
a similar nature.

I know very well your kindness
never writes a bill, but if it should
occur and I myself should be
me enabled to do any thing for you
or for one of your friendly house
now homeward to me, then add to
your kind word also one more
and let me know, how I can serve.
Though no wealthy man but of
animated by the best willingness
you shall find me always ready.

Our voyage was till now not
of much interest. Good weather

S

breezes, squally time, sea sickness, yellow looking faces &c is all what I can say now. I myself escaped from sea-sickness and got only a slight head-ache instead of a full solemn confess. Poor Dr. Parry had two days to lie down stairs and to make a philosopher. You will get a letter from him.

New Orleans 26th Sept. 851.

We arrived here without any further accident and I close therefore this note expecting soon to be enabled to write more.

Please to remember Your devoted friend and take the sincerest regards from me.

Respectfully Yours

Arthur Schott.

My dear Doctor

It was no little gratification I received Your kind note d. d. 21 inst. after so long an interruption of our corresponding intercourse. After receiving no reply upon several letters I felt discouraged to write to You lest I should become an intruder upon Your time, of which I am very well aware how precious it is to You. Several days before receiving Your recent note I intended to sit down and write a few lines to You in regard to those few tropical phanerogams, which I brought home from the isthmus of Choco, placing the

fullest set of this poor remainder
of the collection into Your hands.
Since that time we waited and wait=
ed patiently in expectation to be order=
ed by Congress to finish up the Report
and also to recive the necessary means
to that purpose. Though we succeed=
ed during the last session to get an
approbriation, it was afterwards
found out, that it was too small
leaving only a few hundred dollars
after paying off the arrieres. Lt. Stick=
ler at the time in charge of the topo=
graphical party in the field and at
home was ordered away since, to be
engaged on lighthouse duty on the
coast of California, so the finishing
off of the report is left with two of

S

his assistants under the direction of Capt. Woodruff Topog. Engrs. With me is left to gather up the various branches of Nat. History, Botany & Zoology and drawing the Topography on the maps. — I know full well how much You, my dear Doctor, are suffering under the burden of Your manifold labors and therefore would not dare to ask You for any elaborate account of the plants of our collection. This being, but a poor remnant of a once pretty complete series until the accidents and mishaps of our travels destroyed the principal portion, will be sufficiently excused, if we do not attempt to give a strict & full systematic enumeration. If You should be able however to give me within a

S

months time an authentic list of those specimens, which You are able to recognize wholly or in part and upon first sight, You would relieve me of some embarassement. I have still a great many notes ~~on~~ on plants which I was able to recognize myself, so as to make additions to a list of plants, by which the reader may be enabled to form a general idea of the vegetable growth in these regions. Professor Harvey at Dublin has sent in a list on the Algae of Cartajena and so did Mr. Eaton on our Ferns, so that the Cryptogams will be well represented also and offer good company to what You are going to bring up.

HARVEY CORRESPONDENCE

As You announced to me still an other letter, I omit to write on any other subject, waiting for the exclusive favour of Your letter, which I hope will be very interesting. The specimens from Cartagena are, Thanks to Dr. Triana's kindness, in my possession already for a long time. Dr. Triana will do so in future, too. Yesterday I received from Dr. Asa Gray a letter, announcing the arrival of a box with plants from Japan collected by Charles Wright. Dr. Gray will send me a set of them. Wright is now in Japan, and I hope he will send a good collection. Dr. Gray has also published a list of Wright's collection in Cuba, which I have received. Wright has collected there for a long time, and has sent a very large collection to Dr. Gray. Dr. Gray has also published a list of Wright's collection in Cuba, which I have received. Wright has collected there for a long time, and has sent a very large collection to Dr. Gray.

Dear Sir

The best part of the letter for this second sheet. It certainly needs no especial assurances to see You how much I sympathize with Your feelings, I also fully understand that You do not like to write and talk much about matters, which only can be overcome by our own exertions and in the deep recesses of our grieved mind. It is for the same reason when I did not like to touch those wounds towards the members of Your dear family, ~~with~~ whom I was so happy to see here and in my house. It is not enough to offer consolation but we also must carefully guard the moment for application otherwise it would not answer the purpose. Yes, it must be so, a man losing a beloved

S

wife and worthy companion, as You had, never will wholly recover from such a blow. He stands in life like a tower of which one corner lies shattered.

If we however take our cross upon us and consider ourselves as not standing solely as individuals belonging to this sublunar world, but as parts of the whole subject and destined to a continuant change of shape and position to approach our true destiny, then we learn to look at losses as so many steps towards eternity. The more our heart has to bleed and our mind is put to suffering, the easier we will bear the cross. I have no doubt, my dearest Sir, You have found yourself on that path already and have the end of human existence and the happy change so clear before your eyes, that

it is no more sacrifice for Jon to bow before the will of God. My good wife returns her best and kindest regards to Jon. She fully partakes in my sympathizing expressions towards Jonself. She with a younger and more tender heart, than I possess has not yet overcome the loss, we had to suffer in the very outset of our joined life. How deep rooted the love of a mother must be.

Miss Elijo, when here was kind enough to take charge of a small package containing a parcel of seeds, especially of "Cacti." I doubt not but it came safely into your hands and Jon will dispose of, and turn them to some use.

For the present I am busy finishing a series of Scenic views taken on

LIBRARY COLUMBIA UNIVERSITY

the different stations on the Boundy line. To make these landscapes more valuable and worthy for science I pay particular attention to the execution of the foregrounds, which are filled out each one with some peculiar plant indigenous to the country. I wish You could see some of them. The most striking features in this regard are offered by the Cacti, which deserve more special attention on account of their being almost new in the representation of landscapes.

Let me close now and receive my most sincere wishes and love for Yourself and all Yours from Your devoted friend

Arthur Scott

My dear Sir,

Almost immediately after my arrival here this morning 6 o'clock I went to see the Major, whom I found a little weakened and yet confined to his room. I did not expect to hear many important news and troubled my mind not at all, though a telegraphic despatch had reached me yesterday morning at Princeton. Besides a great many other kind doings towards me I am again in your debt for the the speedy forwarding of that mentioned despatch. I had before decided to leave Princeton Monday evening, to have a little more time to stay and to see Miss Elizabeth a little more. For Monday we had proposed to make together a walk over old Clermont grounds, but the weather was so unfavorous and rainfall so heavy, that hardly anybody was able to go outdoor. I took my advantage Sunday morning walking down the well known lane, passed homelike Clermont and went down to the spot of the fallen copse. It is too much the worlds course and I therefor do not allow myself to say much about. —

The Majors intention with the telegraphic despatch was to have one here in presence as the Commissioner is seeing himself ready for new appointments. My mind lost by the late management of the late Boundary Commission all elasticity and trusting so much that I do not expect much better now.

Dr. John Torrey, Rose street No 67. New York.

What day the intended members shall be reappointed, I do not yet know, though I think, it will take place in some few days; how long it will be until we shall be sent out again is yet a secret, I presume, to every body, even to to the Curators themselves, perhaps the money is lying yet in the mint.

After some talk the Major requested me to divide some Texian seeds, Dr. Bigelow had brought along. I had also to label them. He intends to send one portion to a gardener in Newyork. Having done with this I went to the Smithsonian to see Messrs. Prof. Henry and Baird. With the latter I arranged that I am able to overlabel to morrow my geological specimens

In regard of Dr. Berry and wether it would be possible under the ruling circumstances, that he may stay sometimes back to assist You in examination of our collections, I would not venture to say anything. If I am right, so can Barry himself probably the best in this case, as he is well favored by the Major.

I shorten this letter with the request, You may be kind enough to cause the forwarding of a little box, which is placed among your stores in the College. After receiving the questioned object I wish to send the box with several articles to Newyork again.

My dear friend

It was with not a little gratification that I and I may even say, that we my wife and my humble self received once more again a letter from You after so long a silence. I concur fully in Your views about friendship and also about the occasional exchange of friendly messages, as being the flowers of mutual sympathy, however rarely they may come to bloom. It is a sad truth also, and we must not deny it before ourselves, that brambles and thorns of every days life too often interfers with that portion of our intellectual as well as that of our soulds dealings and exchanges, which we

S

should never allow to be influenced by others ~~ben~~ then those which emanate from above. Alas! we are men — beings with an eternal soul imprisoned in a body one or two grades above vegetables which by their roots are fastened to the ground. Though we like other animals are allowed to move freely about, but still we have our roots too, which continually seek to fix us to the bottom — so we may not wonder about ~~the~~ seeing us often associated with — brambles & thorns. So it will be better not to exercise too much scrutiny, especially when friendly relations are concerned. "Once a friend always a friend" so it must be, if we wish to do honor to ourselves. It is likewise certain that we ought never let sink our past into obviousness. If we should suffer us to be negligent about that, we would needely destroy the trinity of our existence. Even a wolf or tiger honors of

a "to morrow" for they close up the remains of their savage repast, to enjoy it, when hunger will crave again, as short wolf & tiger have some what of a future — but there is no soul, where to treasure up the gems of the past. I believe this belongs exclusively to man and he is advised to keep that which is best — You ask about my singing sports. Alas singing & have abandoned on account of our removing farther from the city, than we did before. About 10 months ago I bought a little place upon the Georgetown heights. A framehouse more roomy, than that in West Street and surrounded by a garden will offer a better occasion to raise a little family. If You ever should come once again to Georgetown, I am sure, You'll find our purchase

S

a reasonable one. Now music we cultivate more in family style. Thus far as Mrs S. can loosen herself from the little matters she sings with me ballades, duetten &c. I occasionally write something for two voices. I am sorry however that musical affairs in W. can not make a start for a more elevated position, which truely belongs to this heavenly art. My favorite style remains always that solemn strict science of music, in which all the different voices and instrument are equally thought and worked through, so as to be one democratic musical mass. Such as the ancient masters and also Beethoven and Mozart and others have created. I do not care a straw for that modern monarchical carting ting, where only one voice is domineering supported by a mechanical run of accompanying instruments and voices.

Ever since I had the pleasure of seeing Dan last, we working hands in Washington experienced hard times in consequence of Congress making no appropriations for surveys and explorations. Our portion of the strait concern was also locked up by the perfidious policy in the navy department, which at all hazards wanted, as D appears, to defeat the whole object. Thus we were compelled to finish our fieldwork without pay in order to go with our labors finished before Congress and ask a small appropriation to pay our dues. A few hundred dollars was the whole income within two years time, so we have to confine ourselves to the most

My dear Sir

Just now I sent a bundle of plants, containing specimens of my last made collection, to the Smithsonian requesting at the same time Prof. Baird to forward them to You. The specimens are now all numbered and correspondent duplicates kept still in my hands. I wish I done so also with my former collections, which form the part more complete part. To do this now would however be a perfect impossibility. I expect and hope that these lines shall find Yourself and all Yours, but especially Mrs. Torrey in good health. In the Eastern-holydays I felt quiet anxious about Mrs Torrey in consequence of this awful Norther and snowfall. How tormenting these afterwinters are, taking the place of Springs-rising on the Atlantic part of this Continent. Particularly the sick have to suffer under such ~~the~~ extremities of the seasons.

Have You received already Rivens Report and a box containing various articles and specimens. I had delivered them a long time ago at the Smithsonian to be forwarded.

Dr John Torrey, Newyork.

Mrs. Thurber writes to me

Lately I sent twelve Nos of drawings, representing various Cacti, to Dr. G. Engelmann in St Louis; he was anxiously waiting for. The Prof. wrote to me about two weeks ago, that he had at that time not yet received the specimens of Cacti of my latest collection. As I know by yourself, that You had sent them on already, I hope at this time the specimens will have found their way.

Permit me for this time, to be short and receive here with my best wishes and love for Yourself and all Yours.

Sincerely Yours as ever Your devoted friend

My dear Sir

I believe I was pretty certain that I shall start from this place to work up the river. I take therefore the opportunity to affirm You the arrival of your dear letter d. d. N. Y. July 8th containing the advice that the long expected box with plants finally found its way into your hands. I feel most glad to learn from You that You found some interest — at least with Dr Parry's and my part. I myself considered this bundle but as a preliminary one, an advanceguard for a richer one, which to procure time, season and localities, no doubt, would be more fit. I hope you shall became finally aware, that a following main part of our collections will justify our expences in time leisure and even labour.

I am now a little more acquainted with Texan plants and met since my first introduction to them many relations to enlargen natural groups and orders. I was of course continually on the look-out to find novelties and more rare plants but I spared also no work, to unite rare & common in many and various specimens with the intention to bring even a bulk at hand, consisting of a greater quantity of dates to form the easier the outlines of a Texan flora.

Dr. John Torrey, Newyork.

according to that hint, You can easily think, my dear Is to whist bundles are grown those of the Compositae, Leguminosae Mimoseae, Malvaceae &c. Besides this, I got, since I commenced with a second collection many genera & species, which are not represented in the former collection.

I wish You could see me sometimes in conversation with one or the other of Mexican people, inquiring about properties and virtues of plants, for which science this half primitive half decaying race of Spanish and Indian blood, possesses an almost infinit taste. However superstitious and credulous these people may be, I believe, even to that race true science is most indebted for a great many acquaintances of most useful plants. It is that love and that ~~[illegible]~~ that taste for all natural objects, which enable them to live and to enjoy their life in countries, where other people have to starve or where the outlaws and desperados of other nations gather themselves as in an asyl of security.

It is much, indeed very much, what even most enlightened people can learn from these poor children of the [illegible] wilderness. Once a day I was very glad to learn by a Mexican the popular name of a plant not very long since adopted by science. I believe

it is Bartonia or Loasa, one of those plants, the leaves of which are stinging like nettles, in short the mexican name for that western plant, "amor seco." That name signifies both the plant and the people who is applying that name.

I suppose at the time that letter with each Gov. be it in Newyork or New Brunswick the house No 578 in Houston street must be pretty quiet, whilst all the members of the Torrey family are scattered in all directions. I hope every one will enjoy himself the best, that all the dear members will be joined together towards fall, refreshed by a nice countrylife to enjoy the more familiar charms at the fireside. Whatever the feeling may be about such a breaking up a house, the best of it is, that all together seem to enjoy a good health. —

For the names of those little plants, I had the honor to send You in former letters. I am very much obliged; it is one of my privations of my frontierlife that I have neither time nor the means to make myself some studies about so many novelties, I meet with on my tramps.

If it is not too much besides your many and various occupations to think of, I please to remember

COLUMBIA UNIVERSITY.

Washington Dc. August 31th 1854.

Dr John Torrey

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

Dear Sir

Your kind letter dated Aug 26th came duly to hand, some few days after my return from Philadelphia. I am now inmidst breaking up and packing to leave again this place as I soon shall have to sail for San Diego.

Maj. Emory had honored me again with an appointment by which I felt mortified, as he did not offer me some more salary to go out again into the wilds. If I really thought to deserve it after devoting to him and the Commissions interests nearly all my leisuretime before. I told him such addeing also that I felt disappointed to receive now even an inferior at last secondary station. After this he objected my last work and so on in consequence of which I handed in my resignation on account of unproved confidence towards myself and my abilities. Having upon this a private talk with him, he denied this and as I was taken by the whole affaire somewhat by surprize I would have had to bite my own nose in refusing even to accept an appointment — I agreed finially again. Though

I am now resolved to be more prudent and not to banish any more (collateral work for the sake of the government as he always used to style his interest in the Commissariat affairs. In short after coming back safely, as I hope it may be in heavens will, I shall have a splendid material of experiences, knowledge, under my own hand, which I expect to be able to turn some account. Some preparations for making collections in the line of Natural history & Botany are already made. As the Major gave his directions to L. Nichler in this regard he wished the latter may appoint one man of the soldiers to collect and & do up the plants to safe my time; that is to say, I shall have only to superintend this sort of collecting. Probably the Maj. felt somewhat embarrassed to give add to my labors after he never paid me any material credit for. For selfish sake I know how I shall have to do. According to my understanding it was a mistake of the administration, immediately after the law had passed not to leave any superintendance to Military men, where civilians ought to have it, to make more of a U. S. officer Commissioner. It seems to me the whole commission will soon have a regular cutting down tendency of all military institutions. We have here again one of those anomalies between the written and the executed law, as it is practised by politicians

In regard to my starting the following. I probably shall leave Washington Tuesday next to bring Mrs Schütt to her parents to Urbana (Ohio). Here I will stay some days and then come to Newyork, from which place we probably will sail Sept. 20th. At this time I hope to find You in good health and best spirits. We then can talk over what is to be done to turn researches on the new line to a good account. Whether I shall be able to collect very extensively must be left to the means of transportation, as we undoubtedly will have some very wild regions to pass through.

In my letter to Miss Maggie I could not give any certain accounts about my future movements, as I at the time when it was written, did nothing know myself.

It is for some time now that I did not hear of Your family, but as You did not mention any thing bad about their health I am confident, that they are all well.

I would have wished anxiously to come North with Mrs Schütt to introduce her face to face to my kind Dorrey-friends, but ~~that~~ there really was no possibility. My Emmy knows too well to keep one in a resentment also.—

I am glad for Mr. Schultz, to learn that his disappointment at least to some degree is repaired.

That all the engravings are to be done abroad gives me great pleasure, as they undoubtedly will be executed ~~much~~ much

better there and probably for less expence.

I should like very much to know something about Parry's and other California plants, as I shall have to come over a part of old botanical ground, where however some novelties or interesting things might be met with.

For this time let me close with my good wifes and my own best wishes for Yourself and all Your's dear family.

Believe me

sincerely Yours &c

My dearest sir

Your kind letters d. d. Jan. 3 & Jan. 9 have come to hand in due time and were received as they deserve it, with great gratification as they contain at least some assurance, that the dark cloud, hovering over your house some short time ago, has passed over for this time. May it never return and Yourself and Yours spared of such afflictions, of which the moral suffering is far the greater portion. If in since times immemorable) that republics are commonly the theatre of such events. Through all ages the worthiest and greatest men had to suffer such ~~is~~ and similar injustice and even martyrdom. Miltiades, Themistocles, Socrates and even more Christ himself was to be the victim of narrowminded selfishness and jealous despotism — all for the good of the

D. John Torrey, New York.

people, as the hypocrites say. True enough it is one of the many mysteries in the rules of providence, that the benefactors of mankind are made to suffer by the greedy vultures of popular blindness. The same old tale of Prometheus turns up ever and ever again. Well then, my dear Sir, however painful it remains after all a good consolation as Socrates expressed, "better to suffer innocently than guilty."—

Your kind and beautiful gift to Mrs S. was also received and caused thus much cheer and pleasure as the in dwelling beauty of such a token deserves admiration. Mrs S. will write herself.

In regard to our New Granadian ferns I shall transmit them to Mr. Eaton, as soon as our office affairs shall have some authorized book. The matter I understand is to come

up before Congress within the next days. The Secretary of the Navy, as Mr. Michler says, takes a great deal of warm interest in the work and promised all his assistance. Michler has been officially sustained in his not submitting to Lt. Craven's overbearing insinuations. The case was considered equal to that of General Kearney and Commodore Stockton of California remembrance.

Our survey recognises the project for a Ship canal even more favorable than heretofore surveys and preliminary report suggested. I think if our report shall be come before the public it will cause a stir.

I lately tried to see Mr. Hebert for the sake of ascertaining the price of a number of „cactiplates" You wish to have. I did not find him at home but left him a note and expect now every day information.

J. Engelmanns Cactus report one

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

Hundred copies will cost $5.00. as I was told in the public printing office.

The letterpress of Vol II. Mexic. Bound, is all done except a small paper to be furnished by Mr. Baird.

I read of late a small synoptical extract report on the physiography of the Isthmus of Chiriqui before our little Association for Natural History. As the Secretary (Navy) seem to have no objection for its preliminary publishing, I shall send it probably to Silliman's journal.

The general report will I am afraid not admit anything in the line of special Botany, Geology or Zoology and so we will have to look for some other medium by which things will be made known. Congress became exceedingly conscientious to save the nation, cut down others but not injuring themselves and their friends.

Please give my love and best regards to all of Yours and believe me as ever

Yours sincerely

Arthur Schott

CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Sir,

Just this morning I arrived here having made for this time my last packmule trip. It is a pretty long time since I am in debt towards You for a letter of Yours, which I received a short time before I went off from Eagle Pass to visit the mountains and silver mines of Santa Rosa in Mexico. Dr. Bigelow and myself have been invited by a „Dr. John Long" a born Philadelphian and now citizen of Mexico. This man had worked for some time the mentioned mines and broke himself, notwithstanding those ores being of the richest I ever saw. I made quite a collection of them for I am sure that the beautiful country round Santa Rosa may come at a time into Good Uncle Sams Care. The surroundings of Santa Rosa are thus valuable for the miner as for the stockraiser, agriculturist and even mechanic. The botanical part of our expedition had Dr.

Dr John Torrey, Newyork.

Bigelow, but the season was not a good one and thus he got hardly more as he was to expect. The character of the vegetation or rather the whole of the physiographical condition are in a diminutive scale alike those of more southern regions of Mexico. The town Santa Rosa is situated on a well watered tableland and its immediate neighbourhood ranges E — W. a most picturesc sierra of secondary lime ~~stone~~ stone, much intersected by veins of silverore & galena. Trapp, basalt and even lott witnesses of a later vulcanic catastrophe are frequent and strike the eye of every mans open eye. In and round Santa Rosa Orangen, Laurus persica, the Palmetto, and others are growing, whilst further up in the mountains a more northern vegetation prevails, showing the Arbutus, Quercus florida, Sugar maple &c. A real pity indeed is, that this beautiful and gifted country is nothing more but a field for rubbers of every description, Indians, fullblood, half blood, Mexicans, Alcaldes, Curas &c.

I forgot that I am most in hurry to finish

these lines and to give him the advice, that I shall start from here the day after to-morrow, except that our baggage, which we had to load on an oxcard, should not arrive. Should the latter be the case, then I would make a delay of some days more. I am however much in hurry, as I presume that Maj. Emory to get my notes and my works to hand. This is the reason, that I first have to go to Washington, before I shall see all my dear friends in Newyork. Officious first — it is disagreeable — but we can not help.

Miss Janes letter, dat. Dec. 10th came to day into my hands and it was highly welcome, I regret only not to have time to answer it immediately, though I hope to do so in some few days. I hope Mrs M.'s health is restored again. If you please return to all the worthy members of your family my sincerest respects, until I shall be able to do this verbally myself.

CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Sir

Your kind letter reached me in due time. If I had not expected to soon have the pleasure of seeing You here Washington or Georgetown I would have answered it instantly. In looking over Yours again Your desire to ~~know~~ hear about the interesting Astragalus chamissonis induces me to pen to You about that plant, what I otherwise would have spared for a verbal intercourse. The locality and the only one I ever saw it in situ was a rocky ravine on the West slope of the Sierra del pajarito in North-Western Sonora. I found the shrub of from 5 to 6 feet height standing under shelter of some other shrubbery. The habitus of the plant, when compared with those found by Dr. Brigelow on a Sierra some 30 or 40 miles below El Paso del Norte, was less scrubby the twigs being more slender and the leaves less stout and thick. I have not the least doubt ~~that~~ what Yourself and I look for remnants of the flowers

sticking to the leaves of the plant are nothing but floral remains belonging to the plant. I am very sorry that the various collectors encountering that mountain shrub could not succeed in finding it in a more favorable state of inflorescence. As these legumes however are now a sort of a thoroughfare I am in hope the discovery soon will be made.

In regard to that note in Captain Pope's report after which I shall have found the Astrophyllum lower down on the Rio Bravo, I refer You to one of my former letters, which states that this was a mistake and a short note in the Boundary Report to correct that error would be in place.

The plant seems to me to belong exclusively to the more elevated portion of country and perhaps be considered as inhabiting but metamorphic and Serpentic rocks and a corresponding soil.

I am busy at present to number the specimens of my Mexican botanical collection and I shall have the pleasure of forwarding to You as best possible set for Your perusal, thus soon as I finish numbering.

How the Alta flora shall compare to that of the Rio Magdalena I am not able to say, for the

latter remained unknown to me. I do not doubt however that there must be quite an analogy between both. To characterize the flora of the Atrato I shall have to depend chiefly on my notes both written on memory and also on papers. The shores of this really magnificent river exhibit the richest treasures of tropical vegetation and do I regret most that just this portion was lost without being able to replace the collections again. The other regions traversed on the Truando line to the Pacific are certainly also very interesting and relate to that of the Atrato a circumstance which will aid us in retracing the state of things on the Atrato.

The surroundings of Cartagena are probably best known as this port must have been visited often, especially Humboldt sojourned there and in the neighboring Turbaco for several ms. Thus I consider what I gathered there [illegible] as integrating portion of the whole.

HARVARD UNIVERSITY
BOTANY CORRESPONDENCE

The entire line from the Atlantic to the Pacific does not reach above the lower limit of tropical vegetation, the prevailing features of which are palms, ferns, Musaceae, Marantaceae, arborescent Gramineae, Orchidaceae, Peperaceae & Bromeliaceae,

besides a richly developed collection of leguminosae.

In regard to our office proceedings of the Atrato expedition nothing cheering can be said, as the matter is still a pending question between the commanding officers. Probably a dispute will rise between the departments of War and Navy. What I do now towards a final getting up of a report I do privately for the sake of science, quietly waiting for a better opportunity.

Mrs. Schott desires me to respond for her to Your kind remembrance and joins me offering our best wishes for Yourself and Yours.

The expected death of R. Brown will be quite a great loss for the scientific community and will be much regretted.

Other matters I leave for a personal interview. Please give best wishes to all Yours from Your

My dear Doctor

Permit me to announce to You the despatch of a bundle of the long promised european plants, some of which may perhaps be acceptable for Your herbary. I added also some of my few algae, which I had occasion to collect on the gulf of Mexico as on the shores of the Carribean Sea and on the Californian coast. I mean them for the more artistic use of Miss Eliza. I placed the package in care of Mr. A. Avery one of the

communications of the late Lieut. Strain.
Mr. A. is now preparing again for
a new exploring feate on the isthmus
of Darien. and as he was telling me
of his going to New York, I asked
of him the favor to take charge
of the package, the contents of which
had been lying stored away in the
Smithsonian safe enough — but un-
despatched.

I lately purchased the big book
Vol. II. of Boundy Report. and feel
quite relieved seeing myself in
possession of it finally. — I have al-
ready commenced to make notes
in regard to localities either omitted
or mistaken. Perhaps there may be
some opportunity to correct errors
of that nature, as far as science is
concerned.

Respecting our Arctic affairs every-
thing is striking fast the Secretary
of the Navy having refused to pay
our Labors or even to acknowledge
Lt. Nichlers authority for appointing
us for one years time, as he was really
authorized to do so by the Secre-
tary's written order.

What Mr. Nichler is going to do I
do not know but he charged me
again lately to collect all possible
information in regard to the collections
made during that expedition.

I will not before long I shall
receive the tables and enumerations
of specimens collected and examined
by the various scientific gentlemen

Dear Sir

Staying

Although I am (here) again since the 12th of June, I could not spare so much leisure or rather to say an undisturbed space of time, to bring in order a pretty large bundle of plants, which I collected since I left Houston. I had been very glad to send off this collection, for I have to leave now this place as a Gain and as we will be scarce in with brandy bottles, the rest of my plants and others collections must remain here. I don't like at all to leave such things without proper care, but I go now not to help and I will do the best, to secure them.

Dr. John Torrey in Nem

During my sojourn here I received a letter from Dr. Parry, who seems to be well satisfied with his Gila trip and some nice botanical acquisitions. His letter is written on the route coming down from El Paso del Norte to Presidio del Norte, where he shall stop for some time with My: Emory's party. Next autumn we will probably meet together again in this place here and what then I do not yet know. Perhaps we shall go down the valley together. From My: Emory I did not here any thing and all what is going on above are deep mysteries for us here. For that reason can I not answer to several times made questions, as well time) the work on this

(2)

[illegible] shall be finished and what
will [illegible] do with the matter
[illegible] Dr. Parry and [illegible] the specimens
[illegible] that bundle [illegible] P. C. Grahame
[illegible]. I wrote to him that this col-
lection now must be in your hands
according to a short notice you
gave me once in one of your letters,
still I myself do not know surely
wether that bundle came to into
your hands or not. — Entirely de-
prived of leisure and means and books
to make even [illegible], I can
hardly consult my [illegible], wether I shall
have some novelties among the plants
I collected in those regions which I
crossed, I pray also to your attention on
the localities and on the season, in
which I find the plants.
Some time ago received also an
encouraging letter from Prof. S. Baird
to ask me to collect specimens for

S

Natural History. It was quite in my
early boyhood, when I last practised
to skin birds for similar purposes and
I had now to learn again, to procure
named specimens for the Smithsonian
institution. Besides these things I
keep a bird for minor objects speci-
mens to ascertain afterwards the
nature of those formations I met
with on my several tramps. That
looks quite as a chaos in my tent
and I expect to have afterwards
pretty much work to do, to come
up clear with these collections.

The summer is now highly ad-
vanced and ~~expect~~ I expect not much
more plants, but it will be the season
to gather seeds.

As soon as I return to this place
with I endeavour to send off my
recent collection perhaps the
whole bulk of collections.

Herewith I close with my sincere
regards for You my dear Sir and all

Truly your devoted friend
Arthur Schott.

My dear Sir

NEW YORK BOTANICAL GARDEN
HERBARIUM
COLUMBIA UNIVERSITY.

Your kind letter dated Newyork March 13th 1853 came at Ringgold Barracks duly to my hands and was most welcome. I ought to answer immediately but I was just at that time very busy to get ready for the last portion of my travels to this place, where I shall commence my surveying work, which I had to leave off about a year ago. I had quite troubles to reach this place; for we had no transportation to help us along from Ringgold up the river. In our first trial to make a part of the line by river we were entirely defeated. A heavy flatboat the Major had hired for the purpose was not even fit to keep up in those sudden short bends of the Rio Bravo running in every direction. In about 1½ hours time we had made nearly 2 miles, which to make back (down river) we had to do all afternoon, whilst almost all the sailing hands had to work in the water. Afterwards I had hired five Mexican oxcards, but whilst I engaged them a long expected express arrived with the news, that

John Torrey, Newyork.

To Ringgold Barracks & from there a post road in Texas to San Antonio & then to El Paso. Every reader collection of plants is for me a nice collection, & I can be sure once a little bundle in to the Smithsonian. We can be very thankful to come this autumn to make this agreeable journey & also a nice pasteman.

commissariat wagons were on the road for Bridgeport. In consequence of this advice I failed to break my agreement with the Mexicans and to wait some days longer for the wagons, which finally made their appearance, but not in a very suitable condition. Lame and broken down mules, broken wagons and so on compelled me to make still more delay until we finally got ready to start. Almost all hands at first, myself not excluded, three heavily loaded six mule teams and one extra moved slowly through three dry and arid prairies, surrounding the region on this part of the Rio Grande. One good little riding mule and a broken down old soldiers horse served for the benefit of the whole crowd, to ride upon. I used this opportunity only twice, for such riding is for my taste sometimes more painful than walking on my own good feet, which I can use freely and easily from morning till night without being tired. One day we made 28 miles in almost one stretch through a waterless sandy desert. The heat afternoon was usually 98 — 102° R. I tried always to start in the morning two or three o'clock but there was an other obstacle. My Assistant was taken sick by a very violent intermittent fever. The first paroxism lasting nearly thirty hours. In such a condition I could not transport him and

so we had usually to lay by during the hours, being compelled to march afterwards so much during the hottest hours of the day. The young man is first time in his life sick and thus much afraid to be sick or he despises to take medicine). I gives Gwomatt Blueman, Castoroil and used the powder. Pieces of time) to check the fever with Quinin and all this not without success but I think that poor sick is too much thirsted and this horror before medicin and his impudence) in not keeping diet and other regulations delay his recovering very much. My tent, which is larger was always to his disposition, for I never use any tent, if I can help it. It must have looked sometimes quite funny to see at the noon more like a nursery than a tent letting together of tried travelers in the wilderness. Old Bysenthundert or a whimsical chambermaid and not the best of moves ridiculous [illegible] young man, nodding entirely like a poor plucked flower thrown out door in the scorching sun. — However we are now safely here and I set the men immediately to work, that we may soon be ready to start for the real surveying work. (After these) lines shall be in your hands, your devoted friend will stick in the prickly pears or in the thorny thickets on the banks of the Rio Bravo aided by a hardy crowd of laborers, altogether enjoying the charms of wild solitude, for which I have got a particular taste, for would hardly

HELBAUM
COLUMBIA UNIVERSITY

recognise me in the appearance I must make: Woolsh[illegible]
buckskin and [illegible] leather suit — and a good deal in pieces
too, though the world has not yet perfectly done with
me, however Wilson's master is in training. — In regard
of Dr. Parry I do not know what to think, for he
delayed to come to New Orleans and if he is coming
for my interest he will be too late. The Major was willing
to send him with my party down the river, [illegible]
I had been very glad with such an arrangement, be
cause I have no body along, to whom I might speak
some word of any interest. A german is also with me
he is a straightman and good hearted young man, but
so horrible green and besides so tiresome talkative, that
I am afraid my bag of patience will soon burst. Every
red or yellow flower or dazzling thumble-bug are wonder
for this admiring sporting character, which is on the
other side by no means an active one.

In collecting, I am requested, to do things much as possible
and I myself feel the necessity, for I am alone. It is
a matter of course to take every thing new to me, but
also known plants, of which I find now better specimens
I take too.

In Washington, I saw the some of the original drawings
representing snakes & other reptiles, made for Capt. Marcy's
Report. They very beautifully done and will offer a
most acceptable addition to the Captains Report,
if only they shall come into good engravers hands.

To know that Miss L. Stone is busy in finishing those
sketches of plants, I find a friend in too, gives me a
good nice pleasure, it is as somewhat working to-
gether, which is always nice among nice friends.

FORMER CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Sir,

Your kind letter dated March 3th came at due time into my hands and was truly welcome, as always every dear messenger coming from Your house. Though I had not heard for some time from Yourself, I was a little surprized to get it, because I had considered myself ever since obliged to write to You, giving to You also the news of my engagement and marriage. As I at the same time intented to send You together with such a letter some accounts of my being bussy at present, the achievement of my intention was delayed and thus You run a head of me. I feel very much gratified for the kind sympathy which I of course never doubted and which You now expressed again towards myself and also towards my good wife. She heartily is joining me in sending our most cordial regards to You in return. until we shall be once happy enough to do so from face to face. In my outside life my being married does not produce much change. I think I was already too much of bachelor and my wife living entirely in her love towards myself, does not think any farther. Thus You may imagine us sometimes sitting on the carpet and employing

To John Torrey Esq. Newyork.

ourselves ~~ppp~~ in selecting out, shells, fossils or plants or doing some other scientific business, of which I got for present a remarkable share to finish. Thus I have to bear at her as a real good assistant. On the other side I use my old notions to assist her in some little doings of housekeeping. Some people may believe me cold or cool in my feelings as a newly married man, but I think it would be wrong to think so, because I rather keep up in my expressions with the sayings of old and wise Seneca: "True joy is a serene and sober emotion and they are miserably out that take laughing for rejoicing, the seat of it is within and there is no cheerfulness like the resolutions of a brave mind. —

Day after to morrow I hope to be able to put up a small box, to be sent to You by the Smithsonian. It will contain a small collection of Texan woods, seeds and other articles, which I desire to see them examined. I believe such will be of some interest as an addition to Your botanical report about Texan plants. I also shall lay by the first half of my remarks on Texan plants, which I wish to request You to look at. Some time ago I received that set of Texan plants, which I brought home lately from the land of the Rio Bravo. Thus far as I understand You wish me to connect them by numbers with my duplicates, after which I may be able to place my remarks properly. In regard of my former collections You did not mention any thing and so I have to go on as

in putting up my remarks, as I did until now. There will not be much difficulty in arranging properly specimens and remarks as most of them possess also Mexican or even vulgar names which I put down with my first labels. Giving them such names, I hope it will be easy for You to join our mutual work. You're telling me, that we soon shall have the great pleasure of seeing You here in Washington. (at such a time) it will be very easy and agreable to exchange all necessary questions and answers.

In regard of that fossil resin mentioned in your letter I have to state that the name [illegible] given to that locality by myself. The hills are called [illegible] and the strata where the fossil resin was found consists of a greenish-yellow clay probably marl. The fossil itself appears on the withered surface irregularly placed in more or less inconspicuous strings. The exact distance of this place below Eagle Pass I am not able to give You now, until the plot of the map shall be finished.

ORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

I hope it will answer, though it goes a little to fast now. The price is twenty eight Dol. which You occasionally may send here, perhaps by Lt. C. C. Parry whom we have to expect here soon. However You ought not to be much in hurry about, for I like to feel in some

connection with Yourself and all Your house and if this is not possible in person, I think even money is not to base to form such a bridge for thoughts.

Please to give my best regards and love to Mrs. Torrey and also to all my dear friends in Your house. and believe me

faithfully Your sincere friend

My dear Sir

Our intercourse seems rather to be checked, I will try to take it up again even upon the danger, that the reading of these lines shall take too much of Your precious time. I wrote to You in my last (Jan. 27.) about the collections of plants, I brought home from my last trip through the Western regions. As I wish to prepare that amount of material for examination before I send it on, I would like to know, whether You want Specimens of all the plants in discriminately known and unknown, or You would like to leave with me a preliminary selection of them, that You

Dr. John Torrey. New York.

labor of overhauling should not be increased. With the cactaceae I am already thus far through as to have sent to Dr. Engelmann a collection of dried and living specimens together with copious fieldnotes and sketches. The cactaceae I expect is now in a fair way to finish soon the last portion of that singular & interesting order of plants. I expect to have among my other plants quite a number of species and if there should be no novelties, it will not be my neglect, for I looked out and picked up, thus much as I have been able to do, while I at the same time was engaged in other labors of quite a different nature. With my various specimens I gathered a great deal of information about the

plants, which I met on the western portion of the new Boundy line, where I was continuantly connected with the inhabitants of those regions. Thus I believe to be in possession of an adequate amount of notes and remarks, which will compare well with that portion transmitted to You before. —

Few days ago Prof. J. Hall was here to go through the Geology of the M. Boly. The maps however had not been finished and so he was not able to finish up. Maj. C. is always in haste and wants to hurry on thus much as possible, but, I believe, with a little more of „Destina' lente' he would come farther.

If I recollect right, I sent to You once with some collection of plants few other sundries, among which was a small amount of a

S

salty efflorescence taken from a Grensandstraten on the lower Brazos del Norte. If it should still be at hand, I would like to know, whether it is really a nitrate for which I have taken it. I wish not to ask a formal analysis, for which the material would not be sufficient.

As soon as I shall hear from You, I will be busy in putting together the collections for examination taking care to take from much of the rough work off Your hands as I am able to do.

Mrs. Schott, who is, thanks to heaven quite well sends with mine her best regards to Yourself & Miss Clara. I saw the other day Prof. Henry's and was quite glad of seeing her in so good health and Spirits. I hope to have soon an other talk with her.

Please give my best love to Miss Jeannie, Hastings & Hurley.

For the latter I have some curiosities again, which I will

"Mai"

Dear Sir

Having finished with my party the Survey between Fort Duncan and this place, I find here time and opportunity to write and to send off some letters, what I hardly could expect. Three days ago a number of 26 letters reached me coming from every direction. I am the more happy with, as I had before to give them up as lost. As I am informed is the postmaster in Santa Fe particular careless often neglecting to forward letters for months. and on the other side caused my continuant travelling and changing of quaters that sad delay in receiving letters. I got now finally two of yours from the date Jany 6th & March 11th 1852. I never doubted the least about a kind attention of You and Yours to let me hear from all my kind friends. I am so happy with. Supposing that my letters, going East have been forwarded quicker I believe in fact, that the most part of them reached, where they been directed. My last one to You, dear Sir, is dated from Fort Duncan March 24th and I hope it will be in Your hands, at the time you shall have this one. About my various movements in this Comission I have also as much as possible the necessary advice either to You or to one of your kind daughters. I have to regret that in this Comission, unlucky & corrupt, as it is from the very be-

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY

gin, that nothing at all can go Straight and that almost every order or arrangement has to be altered or recalled twice and thrice until it may be settled. Thus I was after a sojourn of 4 weeks in El Paso located as Assistant Surveyor for the Line Fort Duncan and the Mouth of the river Having commenced and finished the first portion I receive the order to return to Fort Duncan. Thus far as I understand shall we have to carry the Survey ever up to meet the other parties, coming down. It is after such circumstances no wonder indeed, if letters want half an year to reach their adress. It is in every respect a real Work to practise indulgence and fatalism, for the whole course of the affairs of the Commission is almost for every member a being Thrown from one disappointment into another one. No hardships, privations, suffering of every description would weaken my mind to stay thus long as I can do any thing, for I like to be in activity, but those continuant vexations and annoyances on the side of every one, who thinks to have something to command is tiresome and most discouraging. About the Major I cannot say anything else as always kind and reasonable towards me and it is indeed for his sake and for the my most sincere acknowledgement of that honourable recommendation of Yours, which I never shall forget, that I went to a work as this is, pressed under unfavourable conditions. To answer the trust put upon me I rather leave a piece of my skin behind, before I should leave without having done something. — Being, before but a volunteer-work for me for some time a part of my business and I think that I have

done, what has been in my power and what was possible. Often surveying 6-7 miles in one day, carried along lots of petrefactions, to ascertain afterwards the geological regions we had passed through and gathered then besides of plants, what ever was new to me and that is of a course for me as a foreigner, not a small portion. The commanding Lieutenant of our party furnished [illegible] in every respect and I am therefore of many of those unnecessary things deprived to work easier and more answering to the purposes. After my return to Fort Duncan I hope to be enabled either to deposite or to send off an other and as I am certain a more interesting bundle of plants. The season was now more favorable for collecting and perhaps is the country along the lower part of the river also of more interest than those regions I had travelled over before. Some plants which I saw in blossoms in the last fall, I found again and in the same state early in spring. Perhaps notes of this nature can offer something for the physiographical part of Botany. I had also the opportunity to observe the same plants, growing under different conditions and made in this respect some remarks. It is not only to make new discoveries, that I am collecting, but I think a specification of the plants, which I shall bring home, will be an essential part of the nature of the Countries, I passed over. My dear Sir, it is not much in the Lords Creation, for which I should not have a lively quietly pious interest and what ever leisure and circumstances will allow me to do, shall be done according my best with a knowledge. To be sure I have no other endeavours, but to answer to that honouring trust of yours, so kindly laid upon me.

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

From your letters I received now, I learned, that You had most tedious and troublesome guests in Your new domicile in Cowley-street. Mrs. Forneys infirmity so obstinately resisting every medical protest and scarletfever this neversatisfied serpent, in nesting in a house are certainly sufficient to raise fears. Thanks to Heaven that they gone and that I congratulate You, though so long a time afterwards. It was perhaps good luck for me, not to have any idea of Your troubles, for the farther a distance the more frighters danger. Take however, dear Sir, my sincerest sympathy for all that, what concerns You and Yours. Your opinion about Europe and her regeneration is the same, I have myself. There is, I believe so, no other help as a general suffrage, but not in the sense of L. Napoleon. All the people & nations over there, I am sorry to have this impression, are absorbed, broken down, sucked out by their political, clerical and spiritual rulers. A general consumption have taken place and those now living or rather with some lifetime pardoned people and nations have but to die, to prepare the ground for fresh seed, which providence will procure. The estate of nations in Europe is more like a withered tree, spending its seeds to the Earth and sacrificing to the same its body. The Seed is like the eternal spirit, which never dies, whilst the material world is undergoing continuantly and generations after generations the alteration of creating and destruction. The only mission of worthier individuals in Europe is not more to assist in building and affirming a sound estate of affairs, but it is more apostle like, persecuted and deprived of their home, they have to wander and to be witness about the course of the history of the world. It is sad to think so but an undeniable truth. The Son of God coming into this world was submitted to that same law of nature and thus is the way of nations, families and individuals without any exception. — The Kossuthians are most tedious to me. The endeavours of this man are noble like his character, but I think not entirely free from vanity. It was most dangerous for him to be raised in such a manner as it was done especially in this country more by exaggeration than by real warm enthusiasm. I fear Kossuth and his intentions are more spoiled then advanced.

As I have learned from the letters of Mrs. Eliza & Jeannie intends Mrs Torrey too to send me a communication in answer of my last, sent off in former days. I feel very glad and happy to receive so clear signs of kindness from friends. I love so much and esteem so high, but it gives me an uneasy feeling to know, that it is not so easy for Mrs Torrey to write letters. To be sure, I would be always very happy to receive so clear communications, as I got them until now, but to ask for from Mrs Torreys hand, I never would think of. I would rather consider it as an act of noble trusting on her side, to receive from hand my entire excuse for not writing. I think among friends, whose minds are so open to me to read in, mere customs and manners can be sacrificed a little, without any bad consequences. It is the same with Miss Maggies eyes, the infirmity of which is perfectly known to me and always regarded. If You please to tell this to Mrs Torrey and Miss Maggie with my most friendly respect.

From Dr Parry I heard never since I quitted the neighborhood of Frontera. He is a real good and simple man, whom I like very much. If I should get some leisure at Fort Duncan, I'll write to him, though I know that he is almost too far off. Your remembrance of this shall be, of course, not forgotten.

About 60 miles above Laredo I met first with a peculiarly looking greenbarked tree, apparently near related to the Cactus family. The mexican name of it is „Retamma" but of no known use. However its outer appearance would give to it a right to be an ornamental specimen of Horticulture. It is rich for looking blossoms and I think to gather some seeds. I enclose here a small letterspecimen of the flowers. For this time I am not allowed to give you a better account of my collection, for my leisure is too much limited. Perhaps I will have some opportunity in Fort Duncan.

Take herewith, my dear Sir, the sincerest regards for You from Your truly devoted friend and remembrancer

Arthur Schott

My Adress will be now again

TORREY CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

My dear Friend,

Though I am very limited in time to write letters, my debt towards You presses too hard upon me Be not dissatisfied with these lines, for I am afraid, they are inked down too much in haste. It is now more then a month since I left Newyork and the lofty summersojourn of Yourself and Yours on the grand Hudson and although I never had since any sign or line from any of one of those I love, time appears to me passing away so short as If I were a dreaming Youth. Sure to travel this way is almost like a dream. From this now we will travel more proper, that is to see and mark things more quietly and with leisure enough to contemplate.

Of all I saw during my coming here the Isthmus, the tropic nature I enjoyed most. All the Gold of California is nothing for me, when I compare the riches of nature in the tropics with it. Looking on man and his habitations in those two different places, I must confess I would turn to the South to die but to live with the going down people at Panama

Mrs. Eliza Torrey. Newyork.

before I would join that general Goldmadness (Oromania) which is whirling down the masses of poor deceived mankind at San Francisco. I was glad to leave this place soon, which is by no means a ground for me to live upon.

I was very sorry not to be able to collect on the Isthmus, seeing all those bright children of a luxuriant vegetation. Neither the season nor time permitted me to do, what my botanical soul was longing for. We had much rain and none out of six hundred passengers brought a dry fibre of his garments over the heights of Darien. Myself was the last man starting from the mountains down to Panama. What a horrible aspect I must have made. I believe there exists no specimen of muddology, which was not exhibited on my outside. My whole artificial cover was, I may say, an oryctognostic bill of fair, done up solely in a somewhat grotesc- chaotic style.

What a difference after being out of the eternal twilight of the rich forests of New granada just under the blessing of tropic rain, to enjoy some few bright sunny hours in Panama, the beauty of its situation is hardly to be described at least my pen is unable to do it. The mighty God of the seas, the stern old Cyclop down in the basements of the globe, and the lovely goddess Flora did every thing in their power to create this place a paradise. Old Vulkan and Neptun tried to do the same at San Francisco, but, so

it seems to me, lovely Flora was not to be found to crown their work. Mountains and hills are bare and only down deep in the lower regions unseen by the sun the flowergardens of the spirits of the earth are flourishing. As if a curse was resting upon them, there is not that luxuriance in wining them as those of Flora. Fighting and struggling and an endless gambling is going on after those commercial dragonteeth.

Burning down along the coast of California I saw several places, all more or less going down, that is those pround buildings of the Spaniards, whether the people will go, is a question. I on my part have no doubt that they all will perish, wherever they become mixed with the Anglo-Saxon, provided that the latter is finishing there the proper ground, to follow his nature.

There is many a place, where the Anglo-Saxon commenced but had to leave off again because the location was ill calculated. In such places even the dying Mexican is able to outlive the Anglo-Saxon.

In regard to this place the latter can not prosper until the Western terminus of the Pacific railroad will be finished here. In this case the few Mexican families and Indians will be absorbed quicker than quick. I do not know whether San Diego will not beat San Francisco once, after the said

FOREIGN CORRESPONDENCE
HERBARIUM

railroad will be finished.

At this time You all will have probably returned to the fireside in Newyork. I hope You all are doing well, above all Mrs Porrey, who certainly is the most in need of. I would well have a great many questions to put on You, my dear friend, this well in regard to Yourself as also about all the others. Please, tell Mr. Porrey, that I shall write to him by the next mail, when I shall have had more opportunity to look in the face of botany. My time since I landed here has mostly passed away under the ungrateful labors of preparatory work making by no means any show. It will be for some time until I shall be able to return to the States enriched by scientific treasures, which I shall be able to gather during my travels, if only Fortune will favor me.

Please give my esteem to Mrs & Mr. Porrey and take also my love for Yourself and all the other dear members of the Porrey family.

May God bless You all and be with You for ever. Than we will take care successfully that we shall meet again in good health and best spirits.

Sincerely Your affectionate friend

Arthur Schott

Rec'd Dec.r 3rd

Eagle Pass, Texas. Nov. 7th 1852.

My dear Sir,

HERBARIUM
COLUMBIA UNIVERSITY.

To day I received your kind letter, dated Sept. 4th 1852; it was highly welcome. It is this the second one coming into my hands, since I wrote to You from our Camp at the first Crossing of the Rio San Pedro. After my return from a pretty rough trip to the Mouth of the Puercos I was well received by Maj. Emory, but he gave only some few days to bundle & fix up my collections, to send them East. Under such conditions I was hindered to answer to You immediately as generally to write other letters, notwithstanding that I have quite a number of debts in this respect. It was a most tedious work for me surveying through my herbary the more, as I cannot expect to offer novelties with it. I had until now more obstacles then facilities for every other thing as Surveying and even for that most important business was not given, what I ought to have as necessary. All the affairs of the B. Com. were lead from the very beginning into real Stick in the mud and I have the Maj: sometimes to pity for the situation, he is in. On the Rio San Pedro the Maj: appointed me as Skytsman to the Chief Astronomer (to himself) and promised me to take me with him from this place down the river, but since I returned

has put me again in charge of that surveying party. The
reason of it seems to be, that he is in want of laborious and
working men, on whom he can rely. I myself don't like much
that business, for it keeps me always in a most tedious
connection with certain young people, whom I have only to
disregard for their rough customs and manners, and for
their professional skills and tactics. However I am glad to
serve in my vocation in this well as I can and thus I will
add my stone to hurry on the work to its destiny.

The bundle of plants I send in a box to with an other
collection of preservations and specimens for Natural History
to the Smithsonian. Instructions with perhaps too great ex-
actness were given that you ought not to do so. Among the
whole stuff you will not find much for closer an examination.
As I want for my own herbary mostly every thing, particu-
lar from this country, I pick up what I see and know,
that it is not in my herbary. I put the whole under your
eyes with the request to make freely that use of it,
as you think it is necessary for science sake and also
suitable for your private herbary. Among the few speci-
mens of Cactaceae you will find some specimens of the
flowers of a Mammillaria? (new to Dr. Engelm. & myself).
I gathered some plants with the roots, to send them to
Dr. Engelmann with the request to forward some of them

To Gr. and Dr. A. Gray.

Nov. 10th Since the former date of these lines I was quite overwhelmed with work. There is a rumor in the papers, that Mr. Battelle's Brother returned from the States to San Antonio, bearing orders for Maj. E. to suspend the Surveying work. I do not know what the true matter is, but I never shall be surpriged about any thing in that Corrupt as it is, almost before it was born. I had to bundle up my plants in all hurry and if they should come into Your hands, You will find them in some disorder. I do not know yet, what opportunity Dr. Bigelow and I shall have to send our collections to You, which we are very anxious to have it done as quick as possible. Dr. B. shew me his specimens of that rutaceous shrub, You mentioned in Your last letter to me and as soon as I shall have finished my mail, I am going to see him, to make a plat of that plant, to send it to You with the next opportunity. The habitus of that shrub is indeed striking and I would like to figure it in a proper way for sake of publishing. If we only would be enabled to bring the flowers at hand, the work itself would hardly produce much troubles.

I feel very sorry, that I at this time shall be enabled to write more and particularly to answer Your dear letters, I have before me, but my engagements are for this moment over man's head deep and I must deny myself the pleasure of even a poor written intercourse.

TORREY CORRESPONDENCE

P. S. Dr. Bigelow told me afterwards, that he also intends to send his plants as quickly as possible to You and I preferred therefore my collection not to pack in the box intended for the Smithsonian Institution.

Georgetown Dc. X. 19. 858.

Rec.d Dec.r 21. and. Ans.d Jan.y 3rd

My dear Sir,

Your kind communication d. d. Dec. 8th came safely into my hands and was highly welcome. So at last You got of my Choco collections, what little I was able to save of botanical treasures on that hazardous expedition. I do not know whether You are aware, that the Ferns and Algae I sent to You are intended for your own herbary and use. A full set of the latter have gone already to Dr. Harvey in Dublin. The set of Ferns prepared for examination for the sake of publication, is still under my hands, writing until something decisive will be known how and in what shape the results of that Isthmus expedition shall be made known to the public. Mr. Richter since received orders to prepare his report with the most possible speed, but as there is no money the question about this necessity causes still further delay. I believe they will have to go before Congress. of the first appropriation some $ 5000

Dr. John Torrey, New York.

have been left, but as I understand the Navy department have hold of them for fitting out that miserable little schooner, which had to convey the parties to the Gulf of Darien. This is, if true, one of the many wrongs, which we have occasion to witness here round the seat of government. The appropriation of $ 15000 had been placed [illegible] to the disposal of the Navy department in order to expend it for the immediate purpose of the law, it being charged at the same time with furnishing a vessel to the expedition. Well — I do not wish to count all the crooked trees in the woods and so I am very glad if You enjoyed the beauty of our ferns. I will not deny that I feel somewhat partial for these floral representatives of a botanical order which perhaps more exclusively belonged to bygone geogonical eras and the more public beauties of which I also particularly admire, but this was not the cause of their prevailing in the Chorisollection. This is really accidental and to a great

S

measure the consequence of the nature of a tropical country, the Subsylvatic flora, which is almost alone accessible for passers through, is confined but to certain classes & families.

If You think Mr. Eaton will be furnished with an adequate library I should like to send to him the more complete set of our ferns. Among my "phanerogamae" are specimens of pods and blossoms of a tropical tree called "Tremontius". This genus forester is Zygophyllaceous and as it is the most common tree on the Atrato and Truando I should be very much obliged to You, if You could let me know its identity. — The curtailing of the Boundary Report x is very annoying but it cannot be helped, after the man who ought to keep the publication in his hands has deserted it, after seeing printed his first volume. If the Smithsonian can publish the remainder it will be all right. — Are there plates to Pteridea or Filices? —

The second portion of Your kind

letter in regard to political corruption which seems to embarass You at present warms up again my old and never ceasing contempt for this kind wicked- ness. It only proves to me again that human nature all over our globe is the same and a true mind has only a tryingly small minority to subsist. Sure enough though it is that there is one real ruler, who holds the ends in his power. If there political coyotis, for whose greediness no- thing is too mean, should in reality con- summate the threatened iniquity, I have no doubt the tenor of Your past life and the integrity of your name will not let it come to such extremities as to leave You and Yours unprovided for. If the Lord in his never failing wisdom should permit that wrong to be done he certainly will also take care of a faithful Christian like Yourself. The Lord does not allow a man to be burdened down in such a way and if so he will bless You with adequate strength to bear and follow his commandements

When I first told to Mrs Schott this sad intelligence, she became so affected two quick silent tears of sympathy bright ened her cheeks and she refused even to read the letter herself in the first moment. I first had to remind her that the Lord has every thing in his hands and that no position in the world is so bad that not something good could turn out from it. Well! my dear Sir and most honored friend it is only [redacted] sympathy of sincere friends, which we can offer to You in the trying state of your mind about such ingnilees, for my position in this world is as humble one as I never aspired to have much influence through society. An honest living and a straight walk before God is all, what I intend to do with my little dear family. If there is however or should be some friendly office, which I could perform for You or Yours You will please to command me to those, who will consider it a

S

happiness to do for a friend as much as they can. — If Dr. Newberry was so successful in botanical researches as he was in geology & palentology, I shall be very anxious to become acquainted with the results of his errand on the upper Colorado. I at present draw for him some of his palaeontologic discoveries, which work generally increases my knowledge in this branch, whilst I make something by, ~~of~~ which every housekeeper must be in need of.

Please give Mrs S. and my love to all the kind members of Sam's family and especially to Samuel.

I should feel very happy to have soon a long talk with Sam on various matters but especially on botanical items, of which I have much material to be cleared up. Thus soon as I hear anything of our Arctic affairs I will will let Sam know. In regard to Palms of which Sam could not find anything in my collections, I shall have to write at some day

Dr. Engelmann & wife send their kindest regards to Sam & yourself. Dr. Asa Gray is very busy with his Flora of the Rocky Mountains & adjacent territories. Dr. Torrey is well & busy with his Flora of the Pacific States. Dr. Wislizenus is also well. Dr. Parry is in Colorado. Prof. Allen, Cabot & Coues are in Washington. Prof. Baird is very busy with the Smithsonian Institution. Prof. Agassiz is in Europe. Prof. Peirce is in Cambridge. Prof. Wolcott Gibbs is in Europe. Prof. Cooke is in Cambridge. Prof. Lovering is in Cambridge. Prof. Bowditch is in Cambridge. Prof. Peirce is in Cambridge. Prof. Wolcott Gibbs is in Europe. Prof. Cooke is in Cambridge. Prof. Lovering is in Cambridge. Prof. Bowditch is in Cambridge.

SMITHSONIAN INSTITUTION
HERBARIUM
COLUMBIA UNIVERSITY

Being favoured only with a little bit
leisure, I hurry on to express You, my dear
Sir, my best thanks for Your kind lines
dated August 13th.

As You already know by a former letter
of mine, dated shortly before I started
from Eagle Pass for this trip, You will
not expect any parcil of my botanical
collection. Our party who, since we left
the vicinity of El Paso, almost entirely
cut off, from the rest of the staff of the
Comission and do not know even now,
what time I shall meet Maj. Emory again.
He must be en route now, between here and
El Paso, but as we have in some few days
to start from this place to go further up
the river til the Mouth of the Pecos, I

Dr. John Torrey, Newyork.

can not imagine, when and at what time I shall be enabled to see the Major and also not what opportunity I shall have to send off my collections, grown since to quite a bulk.

As I see by your letters, You are pretty well acquainted with the conditions under which this Comission is working and You probably will know more about it than me.

If the matters will go farther in the way, they kept on until now, two seasons more will not suffice, to come to an end with.

Agreeing with a Fatalism "the more I see I came into this Country, I do not think further as from the morning to the evening

Heaven blessed me with good health and good will and so I live and work on and shall be afterwards very glad, to see, have done something.

It gives me much pleasure to know our first sent bundle of plants and other treasures safe in your hands and I wish only that it may be the same with the next one.

I have to close and You will excuse me, my dear Sir, if I am at this time too short with my news. I know You need also not to spare much [illegible] and this offers me some consolation.

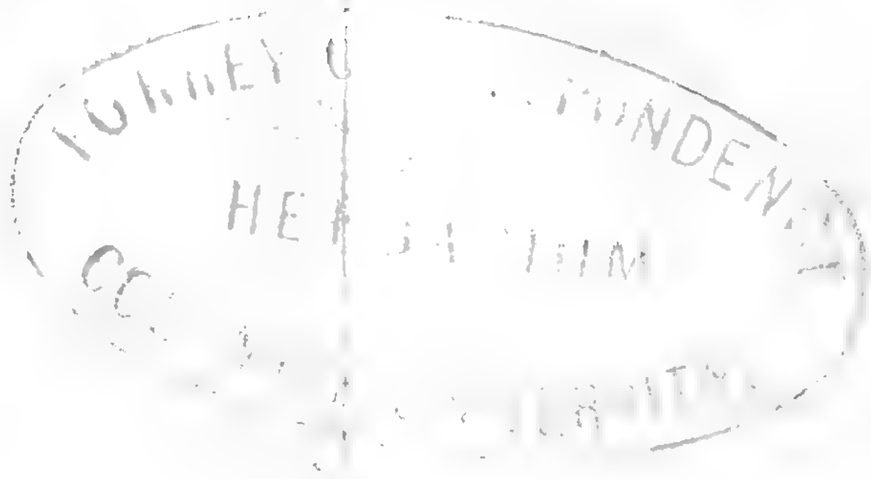

CORRESPONDENCE
HERBARIUM
COLUMBIA UNIVERSITY.

I am, my dear Sir, always

Your most devoted and sincere friend Arthur Schott

Rec. 7 Sept. 27th.
Ansd. Oct. 22

Georgetown D.C. IX. 24. 858.

My dear Sir

Your kind letter dated Aug. 26. came to hand in due time. I would have answered it immediately, if I did not intend to cause first the transmission of the New Granadian plants.

There was at the time an opportunity to do, for all the officers of the Smithsonian were absent and as I rarely go to the City except on some business, the whole matter was retarded. Since that time I talked with Lieut. Nickles on the subject and he told me, to place them into his care, which I did to day with the phanerogamic & cryptogamic which I had deposited in the Smithsonian remain still in Prof. Baird's room which is locked up. He is expected hom-

Dr. John Torrey, New York.

ever to return in a few days, whereupon I shall take the earliest opportunity of sending them safely into your hands. —

In regard to the elaboration of the field-work of that weary Strats Expedition nothing has been decided upon by the departement. We are all suspended and do not know, whether we shall be paid for the loss of time or whether any report will be required at all. Our respective chef Lieut. Mihler seems to be just as much in dark about the matter as we are. If anything will be done, I believe, nothing will be commenced until the next session of Congress or after.

So if You know of any „interims job" where You deem me fit for, I should be very glad to employ myself. —

I saw lately the printer, who is executing Dr. Engelmanns plates of Cattaceae. He promised me several sets of them

Thus I see myself enabled to furnish some friends with the illustrations, to whom I previously had sent Engelmanns printed paper upon that subject. That the second volume of the Mexic. Boundy. Report will be so very bulky is much to be regretted. I am afraid we shall have to bind it over in seperate parts as to make the work more manageable.

In Your letter I received Your kind invitation for Mrs S. and myself to-gether with the children to help You enjoy Your pretty mountainhome on the Hudson. Mrs S. who wishes me to be remembered to You and all of Yours and also myself send our sincerest thanks for your tempting proposition.

The circumstances however would not allow such a Schottisch Exodus from Georgetown, the more so as our little house here was blessed several times during this season with some welcome guests. Among

others we had the cheering visite of Mrs S. mother, youngest sister and father here. Now her youngest brother is staying with us. A very good quiet youth and son, who just graduated with all honors due at Urbana Ohio. I do not know whether You anything about a young college there, where Mrs S. father was professor for some time. The young man made good studies in latin, greek & hebrew, also in mathematics and some natural sciences. I shall help him to learn drawing and practise botany.

I hope Yourself and all of You enjoy still best health and spirits, as You did whilst writing. Your last. Thanks to heaven my little family is all well and prospering

Please give my love and kind regards to all of You and believe me to be as ever

Dear Sir

Allow me to announce to You the happy arrival of a little son, which our family was blessfully increased by this morning 4 o'clock. Mrs. S. had some hard hours to pass, but God thanks herself and the little stranger seem to be in a healthfull normal state.

At the same time let me beg You that I have for You 2 Copies of Dr. Englmanns Bromely Cacti with the plates, which I wish

to transmit to him if possible by the Smithsonian. I think however it would be a good plan if Jen would write about it to Prof. Henry, because sometimes I found things had been left forgotten and came near to be lost.

Since two months we live here in our own house, which I bought. It is beautifully and healthfully situated on the George-town heights with an open view upon the bay. We all and especially enjoy the better air of a more elevated place.

I am not certain yet but it may be possible that some business matters shall call me to New York in which case I shall anticipate much pleasure in meeting all my esteemed friends there.

Until this time please to give my esteem and love to all of Yours and receive the expression of my kindest regards for Yourself.

Mrs. S. at present is asleep, else she would certainly join me in sending to You best wishes.
